

RUNNING WELL FOR YOU. BPW BERGISCHE ACHSEN

**Underpinning Your Progress.
The range of running gear for towable
machinery, car and light truck trailers,
caravans and cab & engine vehicles.**

For reliable transportation,

The transport business is extremely varied. No one job is the same as another. Each application has its own requirements. There are typical jobs and there are special ones. The demands on the running gear are as varied as the needs of vehicle manufacturers and their end users. Nevertheless, the transport business does have one common denominator: the absolute need for reliable transportation. For BPW, this represents both a challenge and an obligation.

place your trust in BPW's experience.

With more than a century of experience in running gear technology, we develop and produce reliable running gear to meet all requirements. Whatever the parameters may be: load profiles, driving behaviour, payload, mileage or flexibility of body design, we can come up with the right running gear for almost every application. Our detailed solutions mark us out as a specialist in more than just towed vehicles. From individual components to an easy-to-install complete system, BPW supplies the solutions so you can make reliable progress.

[Industrial and towed equipment]

**When the going gets tough,
BPW running gear is in its element.**

Whether on the building site or on the piste, in a muddy quagmire or the deepest snow. Towed equipment is only worthwhile if it keeps running. These applications place great demands on operators and machinery alike. In an emergency, work goes on around the clock – downtime would be fatal. Because manufacturers need to know that their machinery will stay mobile, they rely on the experience and expertise of BPW.

In mobile compressors and generators, in cranes, hoists, cement mixers and pumps, in piste preparation vehicles, wood shredders and water purification systems. BPW running gear is robust, with a long service life and developed to meet each of your individual requirements. Wherever you need the solution: on a building site, a skiing piste, in the timber business or with municipal and emergency services. You can count on us.

[Commercial trailers]

We keep just about everyone moving.
From the DIY enthusiast to trades people.

Whatever you want to move, whether to the equestrian centre, to the yacht marina or to your local DIY superstore, BPW running gear keeps a trailer running safely. With driving stability, optimised weight, height adjustment, air suspension, braked or unbraked and as a T or V-chassis, we supply the right running gear for every transport requirement.

We individually adapt our systems to every application. Our experience means we know about the typical applications and the effects of the bodywork on driving behaviour. And what assembly parts will be required to connect the running gear optimally to the body. Talking to you helps us to work in an even more targeted manner. From this perspective, you can be sure that you'll get an economically optimum solution.

[Caravans]

**Wherever you may be headed.
With BPW, your holiday starts the
moment you set off.**

People driving on holiday in their caravan want one thing above all else: to get to their destination safely. BPW running gear is something that can be relied upon in this respect. It guarantees your car and caravan will offer dynamic, safe and comfortable driving so you arrive more relaxed. Your caravan will stay safely on course through corners, when overtaking and in treacherous cross winds. There certainly won't be any unpleasant surprises. Vehicle manufacturers don't have to worry about anything apart from the bodywork. Drivers and passengers will arrive relaxed and in safety.

BPW does more than worry about the driving properties. We also develop new ideas. We co-operate with well known manufacturers, we are members of the main associations and we are involved in successful development partnerships. We know what counts: Flexibility in product design, a wide range of models, low weight, increased payload and easy-to-install components. We help to optimise production costs and we support this with our parts logistics and our unbeatable delivery performance. Together, we'll go further.

[Chassis conversions –
front-wheel drive vehicles]

**Because nothing is too specialised for us:
BPW running gear technology for front-
wheel drive chassis conversions.**

Armoured vans, light platform trucks, box vans and refrigerated trucks, car transporters, ambulances, market vehicles and motor homes. With criteria such as driving comfort, safety and maximum payload, maximum headroom, optimum loading and unloading options and freedom of movement combined with comfort-orientated driving and absolute road safety. If you want optimum creativity, you need BPW running gear.

Our running gear technology for chassis conversions for front-wheel drive vehicles represents another of our fields of excellence in running gear systems. BPW special axles for these chassis conversions keep the overall height of the vehicle low and ensure that the centre of gravity is optimally positioned. Air suspension with a raise and lower function as standard offers comfort and driving stability in all situations. It goes without saying that the reliability and long service life you have come to expect from BPW are all included. As a result, BPW pays off.

[Overview of complete chassis]

Whatever you want to move. We've got the means to do it.

For any job, in any industry, right up to the highest standard. We supply complete systems you can build on. From the simplest to the most complex running gear requirements. Chassis, connection and transmission devices, axles, brakes and assembly parts form a package that is a ready-to-go solution. And topped off with the decisive bonus of an economic advantage.

BPW safety chassis with Swing V^{tec} axles

Tandem chassis with adjustable height connection assembly

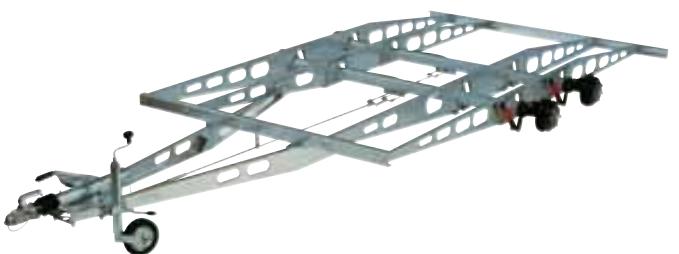

V-chassis

Single-axle chassis with adjustable height connection assembly

Running gear technology for hydraulic raise and lower

Tandem chassis for a car transporter

T-chassis

Running gear technology for turntable drawbar trailers

Axles for front-wheel drive chassis conversions

Running gear technology for twin-axle vehicles

The more questions we ask, the quicker you get to your destination.

BPW doesn't just make running gear systems. We first ask what they are going to be used for. In this way, we develop technical solutions that are precisely tailored to the application. In partnership and co-operation with our customers, the vehicle manufacturers, we lay the foundations for the best possible specifications.

- What vehicle do you want to build?
- What should the gross vehicle weight rating be?
- What axle and trailer drawbar loads do you want?
- What are the operating conditions?
 - E.g. on-road, off-road, use within company premises, etc.
- What tractor vehicle do you want to combine it with?
- What brake system do you want to use? Overrun brakes or power-operated brakes?
- What track width, support centre, wheel connection or special equipment do you want?
- What tyre size are you going to use?
- How should the connection assembly be designed?
 - Flange, straight, offset, height adjustable, removable and with what type of hitch
(Ball hitch, DIN towing eye, NATO towing eye or other?)
- What should the hitch height be?
- What regulations will the vehicle be registered under? E.g. EU or national motor vehicle construction and use regulations?
- Do you need any accessories? E.g. jockey wheels, etc.
- Do you require any services from BPW, e.g. road tests, demonstrations of properties, brake calculations or categorisation calculation?

[Connection assemblies] Everything you need for a secure connection is available from BPW. Perfectly attuned and prepared for all conditions thanks to hot-dip galvanising and priming. No matter what the application. BPW gives you the connection for a secure hitch.

1.1 ZOR straight, offset / ZOF drawbars, unbraked, gross vehicle weight rating 750 kg

The economical solution for anyone who is looking for a reliable, unbraked drawbar installation.
Offset, straight or flanged versions, hot-dip galvanised for long-lasting surface protection.

** EC-approved version; free drawbar lengths on request

FD see pages 144/147

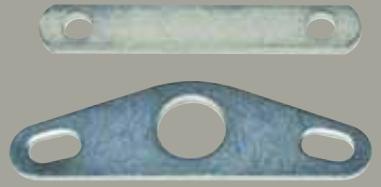

Greater flexibility in the design of vehicle bodywork:
That's the result of using BPW drawbars with adjustable supports. Bolted construction instead of welding is just one of the advantages: The corresponding assembly components are included in the package. Hot-dip galvanised for long-lasting surface protection.

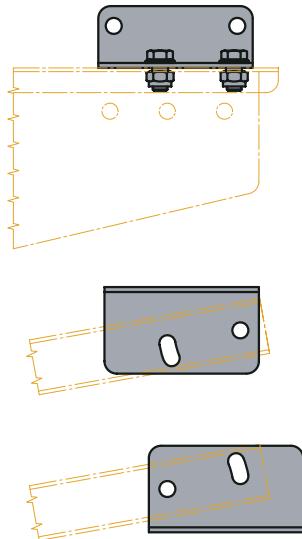

1.2 ZEA drawbars, gross vehicle weight rating up to 3500 kg

1.2 Assembly component kits for ZEA drawbars

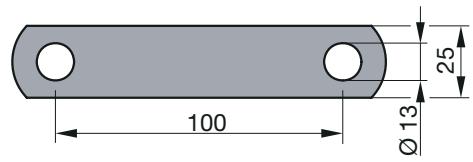

Vertical screw connection
05.803.02.25.0

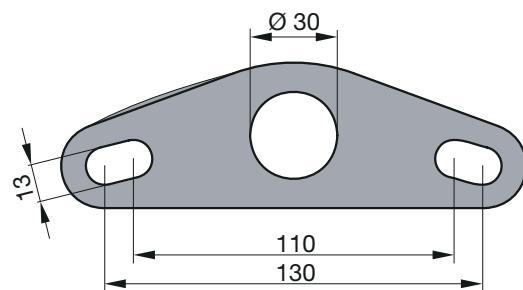

Horizontal screw connection
05.803.02.26.0

1.2 Drawbar tube shackles for ZEA drawbars for mounting towing attachments (ZAF, ZOF)

03.232.25.05.0

03.232.25.06.0

Not available any more:
1.3 ZAF towing attachment

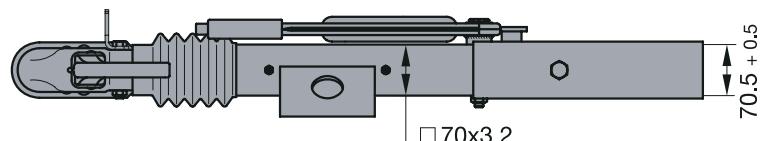

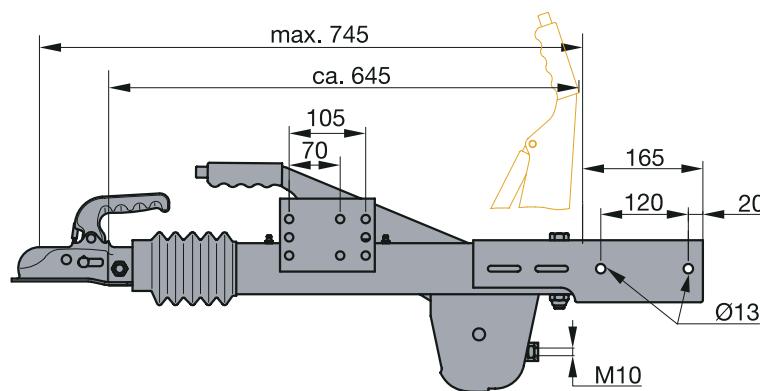

New System available at BPW Fahrzeugtechnik:
ZAF-2 für PKW, Leicht-LKW-Anhänger und Caravans.

Greater flexibility thanks to direct mounting to the trailer subframe. This permits independent frame designs and allows for greater freedom of vehicle design. Also, the hot-dip galvanised surface means that corrosion is prevented.

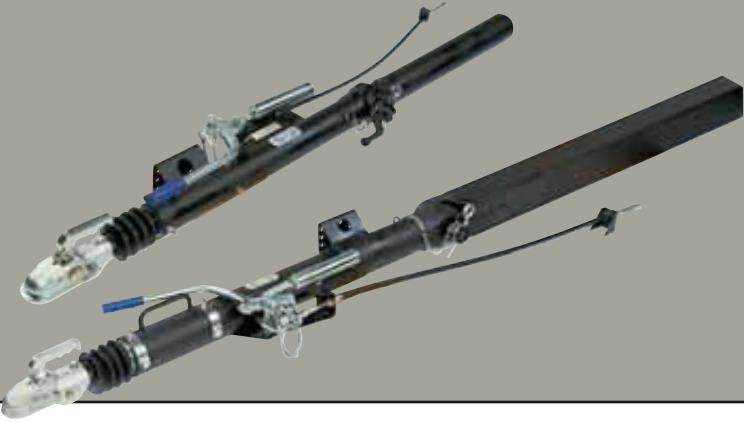

1.4 ZAAQ connection towing attachments, gross vehicle weight rating up to 1600 kg

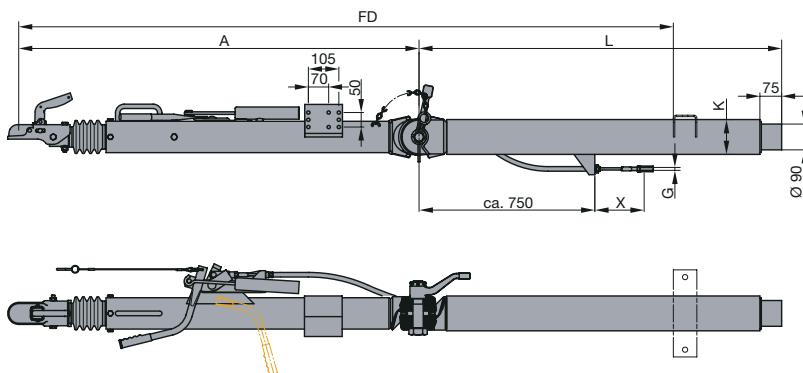

Gross vehicle weight rating [kg]	Marketed under	Type	Order no.	Can be connected to sq. tube [mm]	Permitted drawbar load [kg]	EC test symbol	Weight [kg]
700-1350	ZAAQ 1.6-1	PAV/SR 1.3X	48.25.181.067	70	100	e1*0720*94/20	16.4
850-1600	ZAAQ 1.6-1	PAV/SR 1.3X	48.29.181.030	70	100	e1*0720*94/20	16.4

A towing attachment which puts money back into your pocket. The removable front part shortens the length of the trailer and therefore reduces the space required (and therefore cost) for market trailers. At the same time, the mobile stalls can be approached from all sides.

1.4 ZAA drawbars with removable connection assembly, gross vehicle weight rating up to 3500 kg

**1.4 ZAR drawbars with towing attachment, round type, offset,
gross vehicle weight rating up to 2000 kg**

In the offset version too, this drawbar reliably connects the trailer to the towing vehicle, no matter what the conditions of use. The hot-dip galvanised surface means full corrosion protection.

Convenient and flexible: This drawbar can easily be converted from a ball hitch to a towing eye, and offers an adjustable hitch height. This makes it a universal connection for cars, off-road vehicles and light trucks. A handle on the housing can be used to assist in manoeuvring. The surface is primed and can even be hot-dip galvanised as an option, giving long-term protection against corrosion.

**1.4 ZRV drawbars with towing attachment, adjustable height, with ball hitch,
gross vehicle weight rating up to 2000 kg**

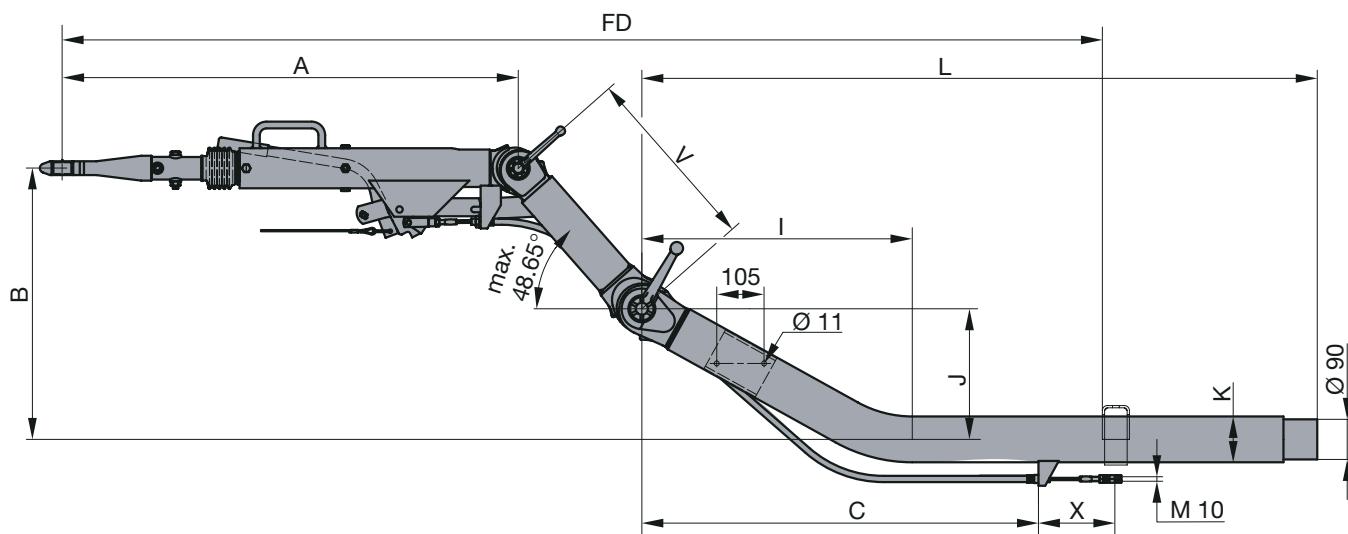

Conversion kits from ball hitch to towing eyes

Gross vehicle weight rating [kg]	Marketed under	DIN towing eye	NATO towing eye	Towing eye for Italy	Towing eye for France
650-2000	ZRV 13 + ZRV 20 B	05.801.90.37.0	09.870.00.32.0	05.801.90.74.0	05.801.90.77.0

Convenient and flexible: This drawbar can easily be converted from a ball hitch to a towing eye, and offers an adjustable hitch height. This makes it a universal connection for cars, off-road vehicles and light trucks. A handle on the housing can be used to assist in manoeuvring. The surface is primed and can even be hot-dip galvanised as an option, giving long-term protection against corrosion.

[Axles & axle systems] Driving pleasure in all variations – all this comes as standard with BPW: SWING rubber suspension axles, RONDO torsion bar axles, tandem chassis, axle systems for chassis conversions and semi-trailing-arm axles. With drum or disc brakes, rubber, torsion bar or air suspension. Hot-dip galvanised or primed: they do their job reliably on- and off-road. Independent suspension and matched to the gross vehicle weight rating, thus ensuring optimum road holding in any driving situation.

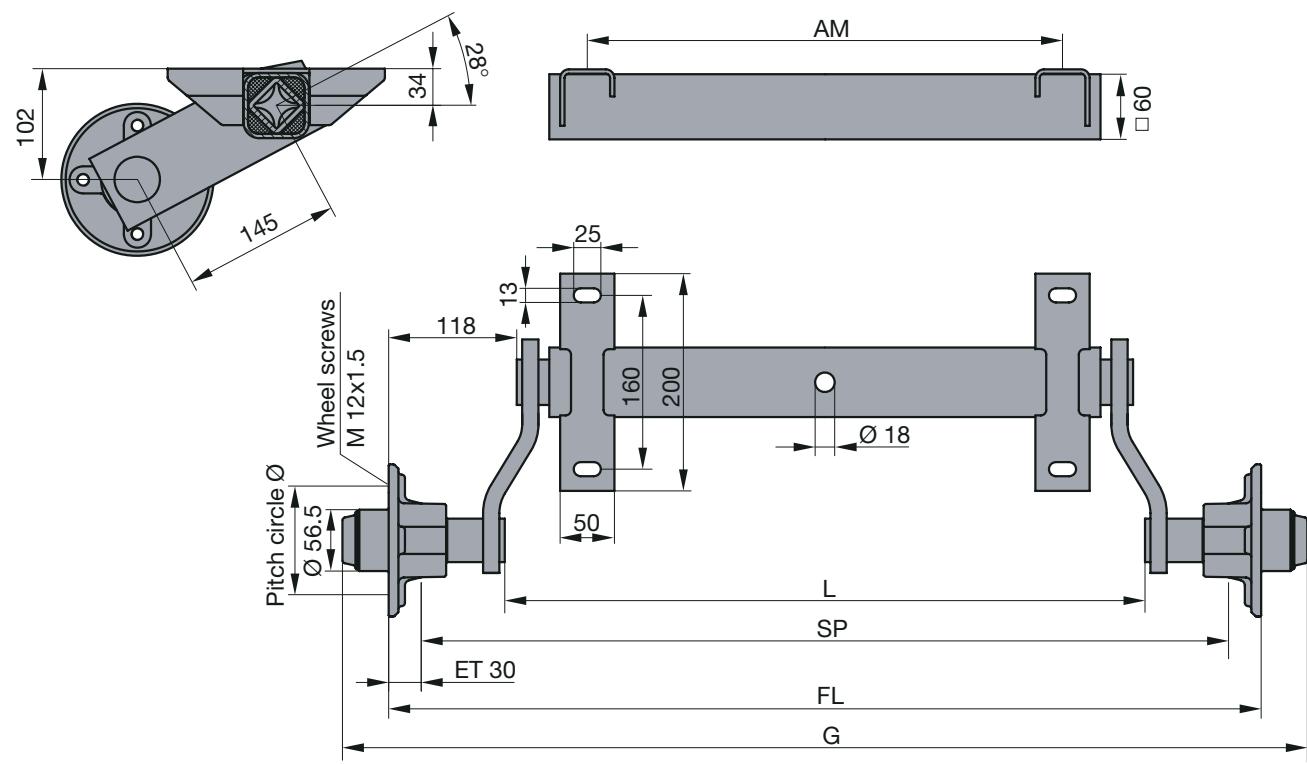

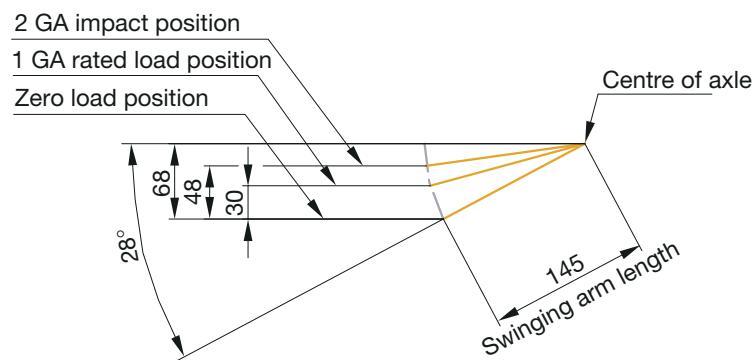

BPW braked axles are extremely easy to fit and are ready for anything. For example, brake cables can also be replaced without having to dismantle the brake drum or the brakes. They can easily be adjusted for wear from the outside. From the basic version through to tandem units with a raise and lower function. With BPW axles and axle systems, both vehicle manufacturers and end users can quickly get down to business.

2.1 SWING rubber suspension axles, unbraked, axle load 550 kg

Axle beam fully hot-dip galvanised: Long-term surface protection • Independent suspension: Optimum compensation for uneven road surfaces • Zero-maintenance suspension: Reduced maintenance costs • Robust axle structure: Suitable for extreme terrain such as when driving off-road or on building sites

* Brake cables for tandem operation depending on the axle centre distance and flange dimension of the axle. *Brake cables incl. tandem compensation, see page 117*
Brake linkage components for single axle, see page 116
Shock absorbers, see page 128

Speed up to 140 km/h

Drawbar connection: Clamping components, see accessories on page 120

Recommended wheel size: 4 1/2 J x 13 H2

Special wheel connections: on request

Tyres: 155 R 13

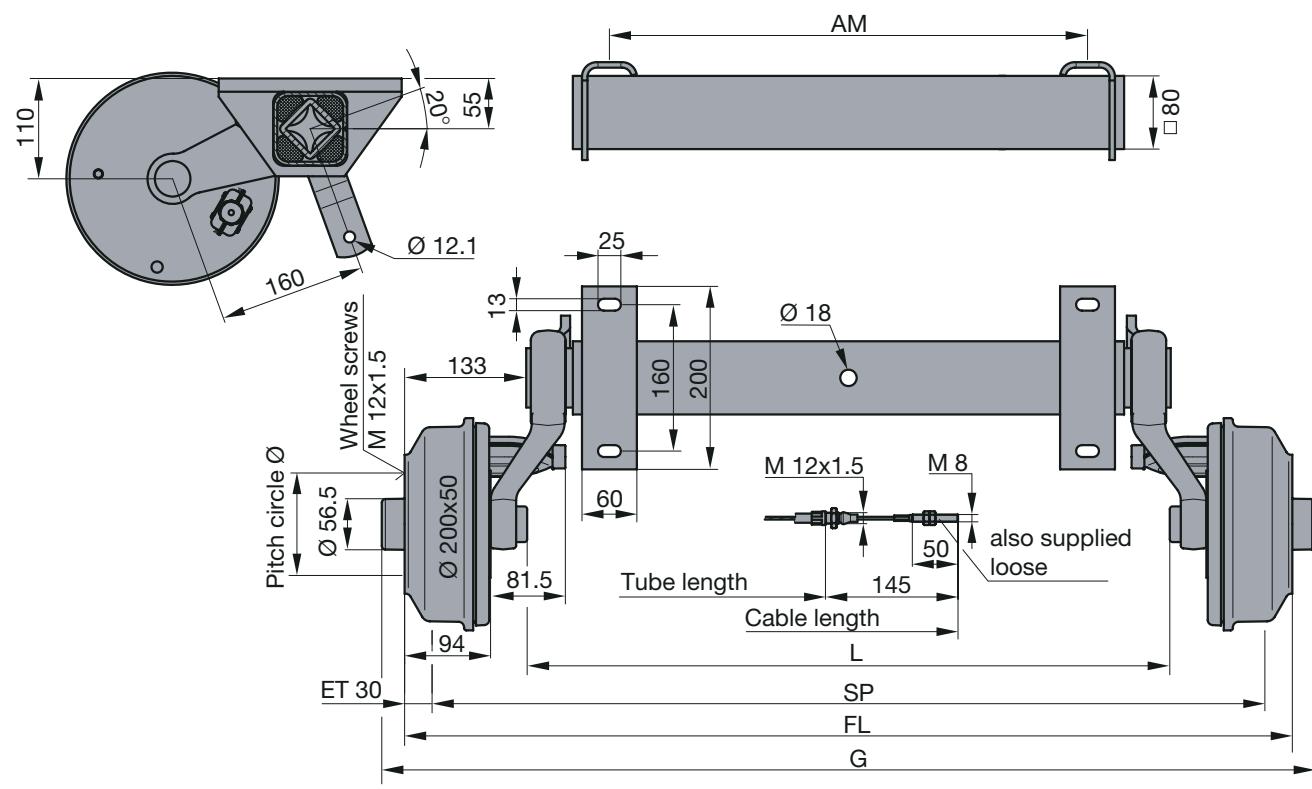

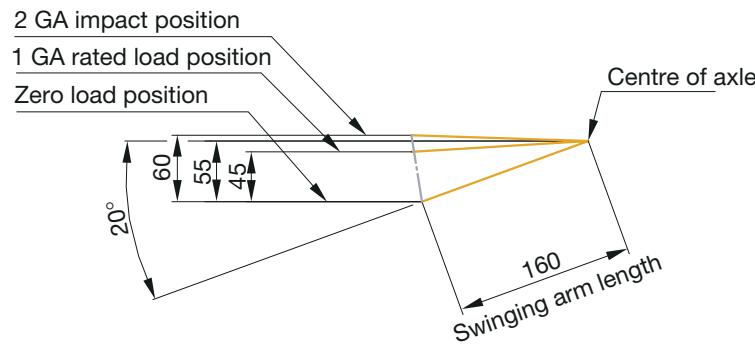

Other possible tyre and wheel sizes, see page 140

Special axle supports and drawbar connections on request

Also available with waterproof bearings

2.2 SWING rubber suspension axles, braked, axle load 1350 kg, wheel brake S 2005-7 RASK

Axle beam fully hot-dip galvanised: Long-term surface protection • Independent suspension: Optimum compensation for uneven road surfaces • Zero-maintenance suspension: Reduced maintenance costs • Robust axle structure: Suitable for extreme conditions such as when driving off-road or on building sites • Robust, easy-to-maintain wedge-type brakes with automatic reversing operation: Straightforward adjustment from outside the brake, brake cables can be connected subsequently without removing the brake drums • Compact bearings (standard in the automotive industry): Zero-maintenance, long service life, protected against dirt and water, lifetime lubrication with special grease • Incl. wheel shock absorber mounting

Brake linkage components for single axle, see page 116
 Shock absorbers, see page 128

Drawbar connection: Clamping shells, see accessories on page 120

Recommended wheel size: 6 J x 16 H2

Wheel connections: on request

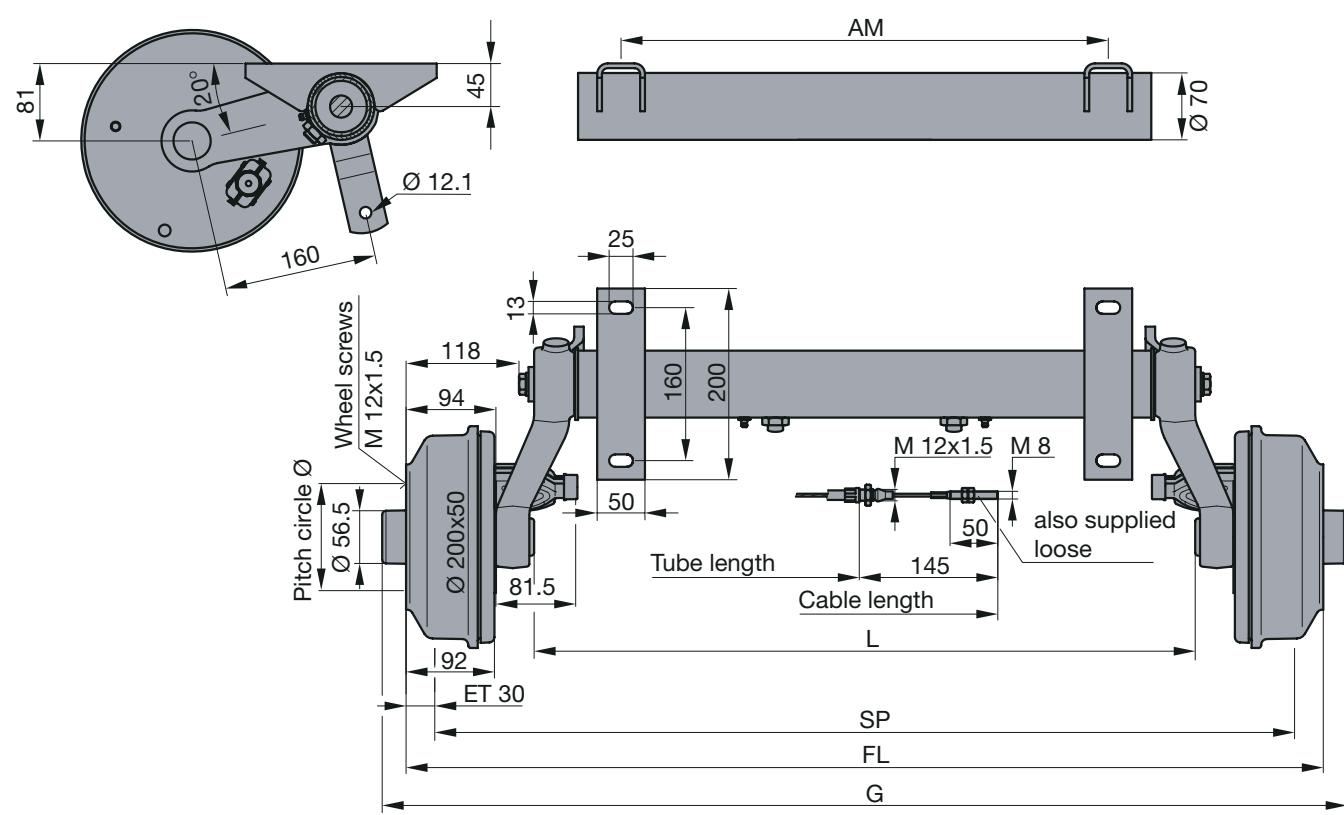

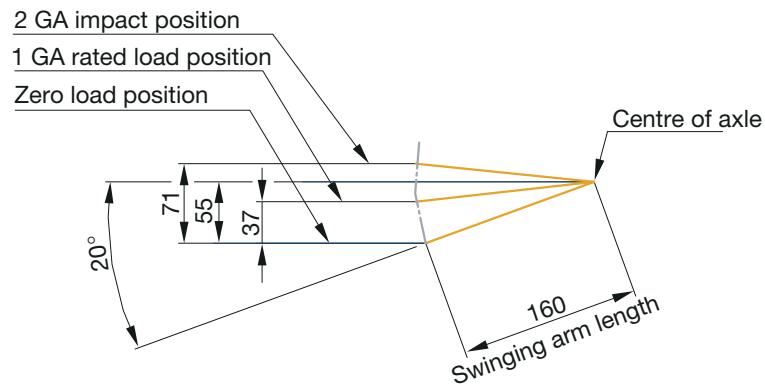

Tyres: 225x75 R 16

Other possible tyre and wheel sizes, see page 140

Special axle supports and drawbar connections on request

2.3 RONDO torsion bar axles, braked, axle load 1050 kg, wheel brake S 2005-7 RASK

Axle beam fully hot-dip galvanised: Long-term surface protection • Independent suspension: Optimum compensation for uneven road surfaces • Zero-maintenance suspension: Reduced maintenance costs • Robust axle structure: Suitable for extreme conditions such as when driving off-road or on building sites • Robust, easy-to-maintain wedge-type brakes with automatic reversing operation: Straightforward adjustment from outside the brake, brake cables can be connected subsequently without removing the brake drums • Compact bearings (standard in the automotive industry): Zero-maintenance, long service life, protected against dirt and water, lifetime lubrication with special grease • Incl. wheel shock absorber mounting

Axle incl. brake cables loose Order no. acc. to wheel connection			Second axle for tandem incl. counter bearing welded (without brake cables)* Order no. acc. to wheel connection			Dimensions [mm]

* Brake cables for tandem operation depending on the axle centre distance and flange dimension of the axle. *Brake cables incl. tandem compensation, see page 117*
Brake linkage components for single axle, see page 116
Shock absorbers, see page 128

Speed up to 140 km/h

Drawbar connection: Clamping components, see accessories on page 120

Recommended wheel size: 5 1/2 J x 15 H2

Wheel connections: 5x140 on request

Tyres: 185 R 15 C

Other possible tyre and wheel sizes, see page 140

Special axle supports and drawbar connections on request

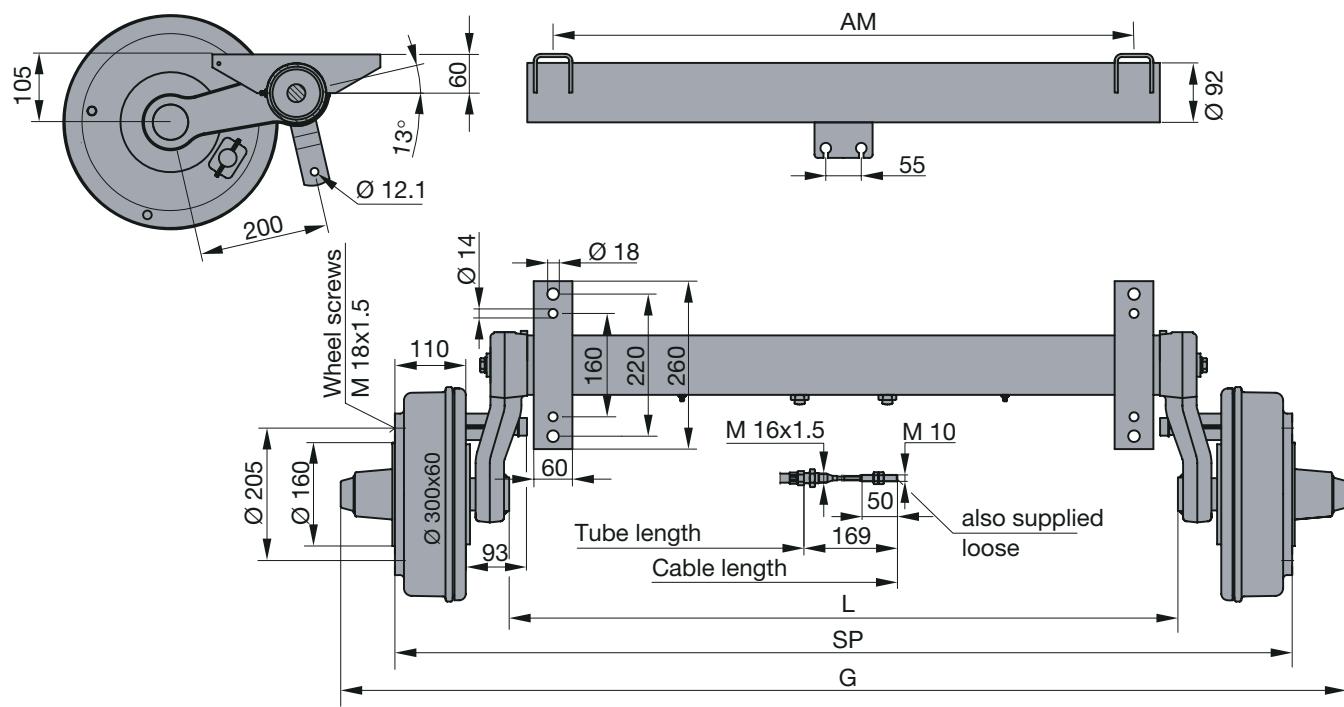

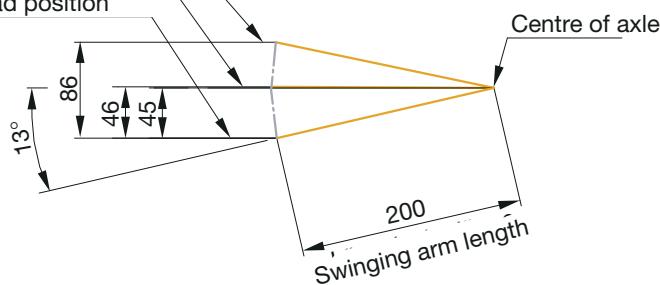

2.3 RONDO torsion bar axles, braked, axle load 2100 kg, wheel brake S 3006-7 RASK

2 GA impact position

1 GA rated load position

Zero load position

Axle beam fully hot-dip galvanised: Long-term surface protection • Independent suspension: Optimum compensation for uneven road surfaces • Zero-maintenance suspension: Reduced maintenance costs • Robust axle structure: Suitable for extreme conditions such as when driving off-road or on building sites • Robust, easy-to-maintain wedge-type brakes with automatic reversing operation: Straightforward adjustment from outside the brake, brake cables can be connected subsequently without removing the brake drums • Incl. wheel shock absorber mounting

Brake cables for rear axle incl. tandem compensation, see page 117
Shock absorbers, see page 128

Speed up to 140 km/h

Drawbar connection: Clamping components, see accessories on page 120

Recommended wheel size: 5 1/2 J x 14 H2

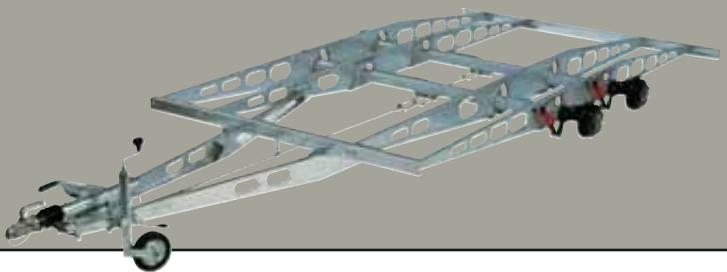

Special wheel connections: on request

Tyres: 185x70 R 14

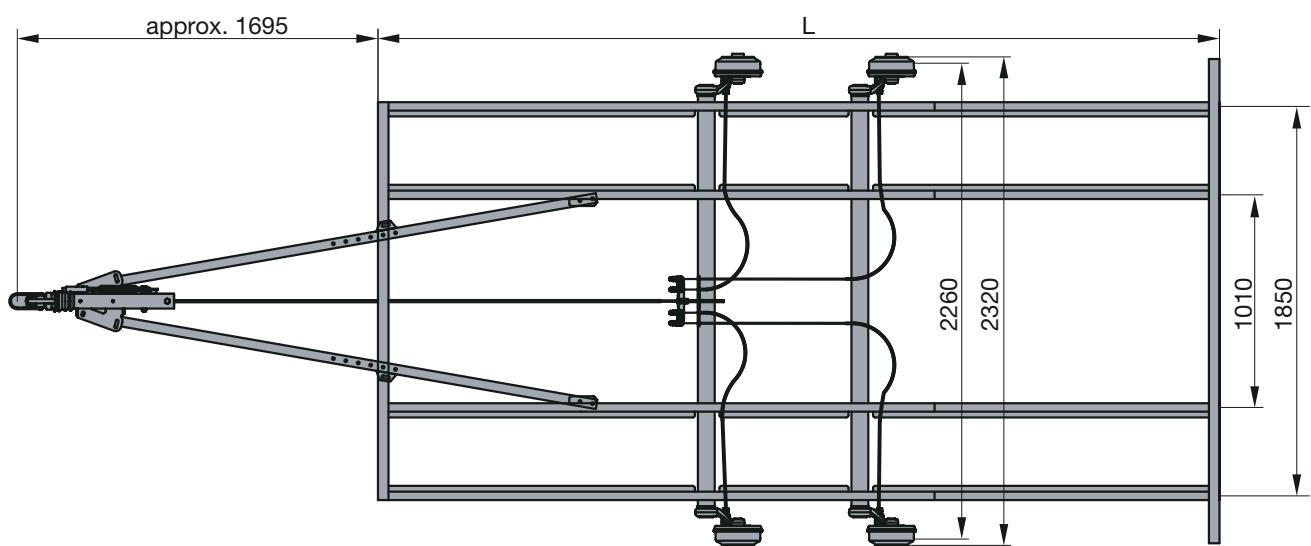

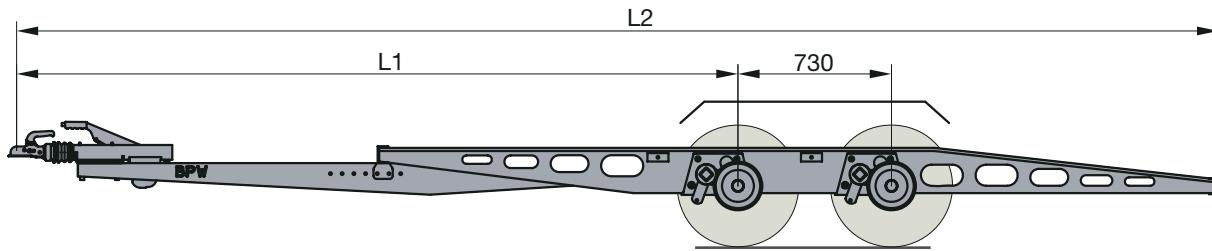

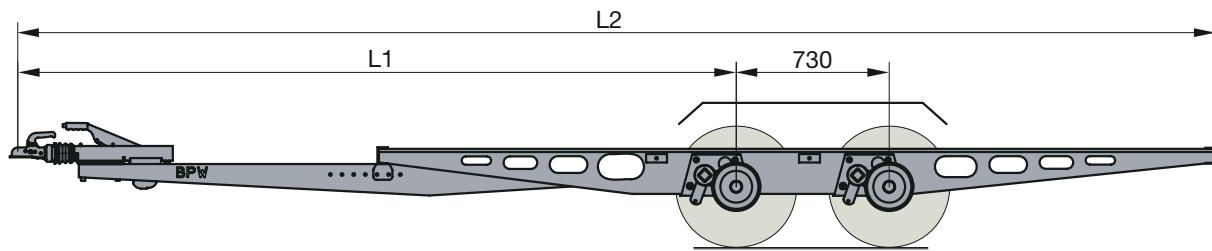

Other possible tyre and wheel sizes, see page 140

Special axle supports and drawbar connections on request

Fully equipped as standard, these chassis allow the vehicle manufacturer to concentrate exclusively on the bodywork. Suitable for a wide range of bodies, fully equipped with chassis, axles and overrun hitch.

2.5 Universal UFT/car transporter ATT tandem chassis

System solution with fully hot-dip galvanised axle beams: Long-term surface protection • Independent suspension: Optimum compensation for uneven road surfaces • Zero-maintenance suspension: Reduced maintenance costs • Robust, easy-to-maintain wedge-type brakes with automatic reversing operation: Straightforward adjustment from outside the brake, brake cables can be connected subsequently without removing the brake drums • Compact bearings (standard in the automotive industry): Zero-maintenance, long service life, protected against dirt and water, lifetime lubrication with special grease • Incl. wheel shock absorber mounting

Shock absorbers, see page 128

2.6 Running gear technology for twin-axle vehicles, gross vehicle weight rating up to 6800 kg

- Torsion bar axles with king pin steering (4-point bearings with limit stop); track varies only slightly when cornering: Long service life with wide steering angles, even in off-road applications, and with high manoeuvrability
- Torsion bar suspension: High level of comfort and road safety combined with good body protection
- Air cylinder bracket system including automatic slack adjuster (AGS) mounted on steering housing: Highly efficient brake operation, with ABS
- Drawbars with parking brake and optional Klemmfix: Variable hitch height
- Running gear technology for twin-axle vehicles also available for internal factory transport

Example: Cornering calculation

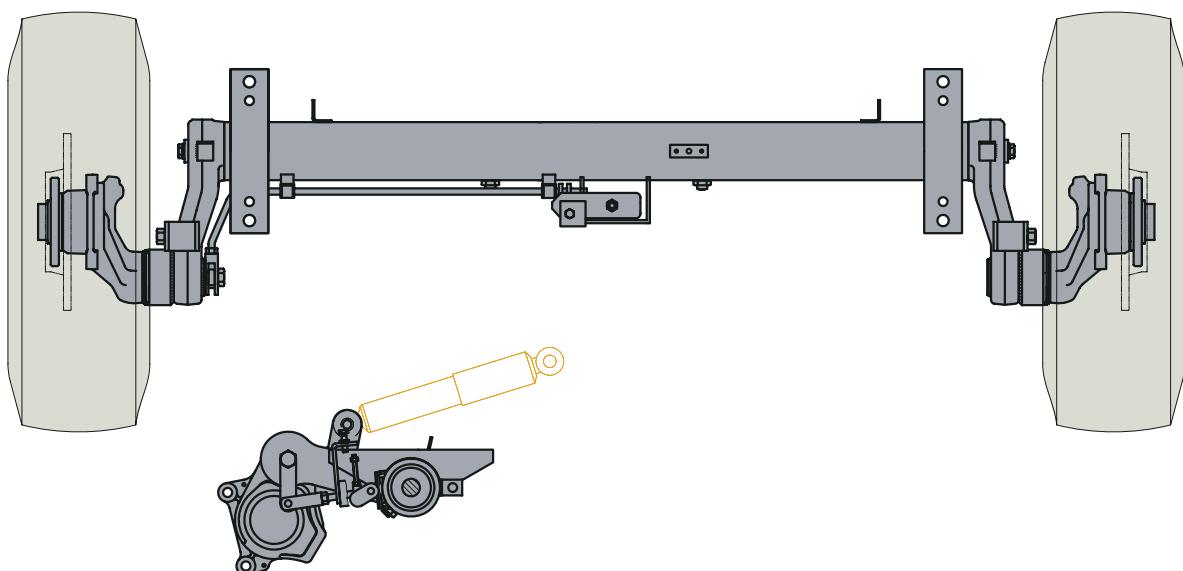

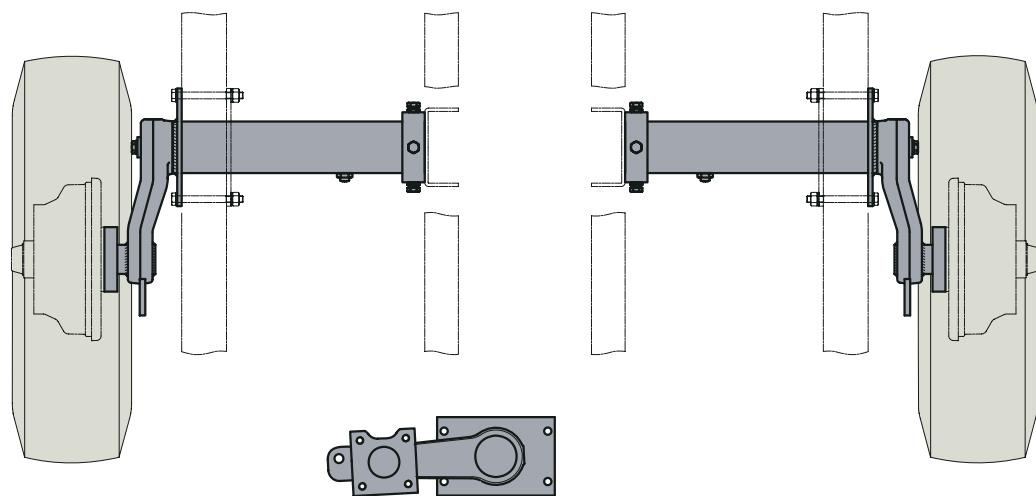

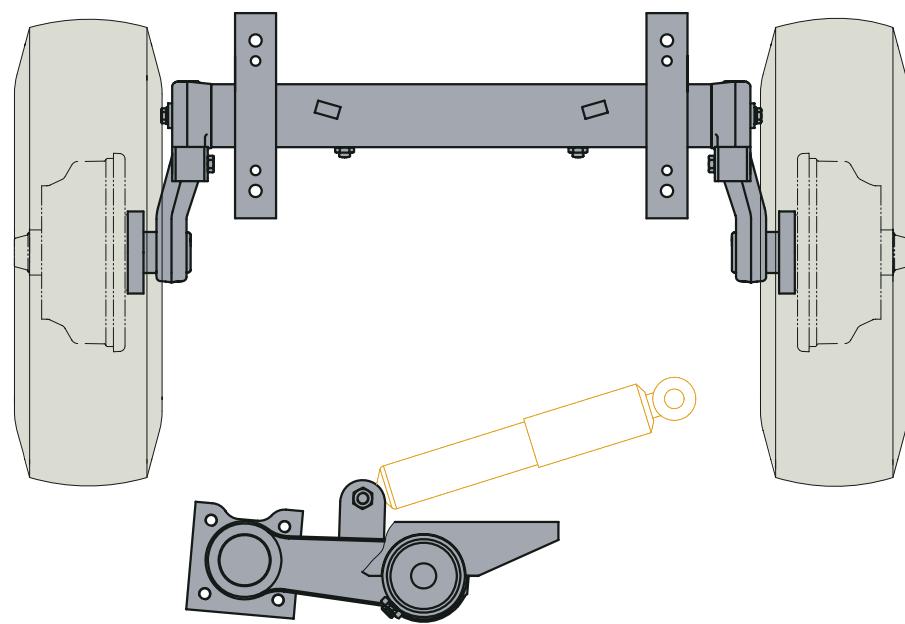

2.7 Axle systems for chassis conversions (Front-Wheel Drive Vehicles)

Armoured vans, light platform trucks, box vans and refrigerated trucks, car transporters, ambulances and market vehicles. BPW supplies solutions with outstanding characteristics for the most popular chassis conversion vehicles such as Fiat Ducato, Renault Master, Opel Movano, VW Transporter, Citroen Jumper and Peugeot Boxer:

- Reduction in overall height: Optimum entry options, maximum headroom, optimum loading and unloading options, high level of road safety due to low centre of gravity
- Variable body dimensions due to a wide selection of wheelbases and track widths
- Delivered ready to install: Reduced assembly times
- Almost infinitely variable swinging arm setting: Variable ride height setting to suit vehicle construction

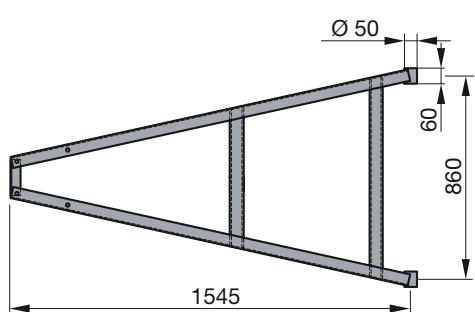

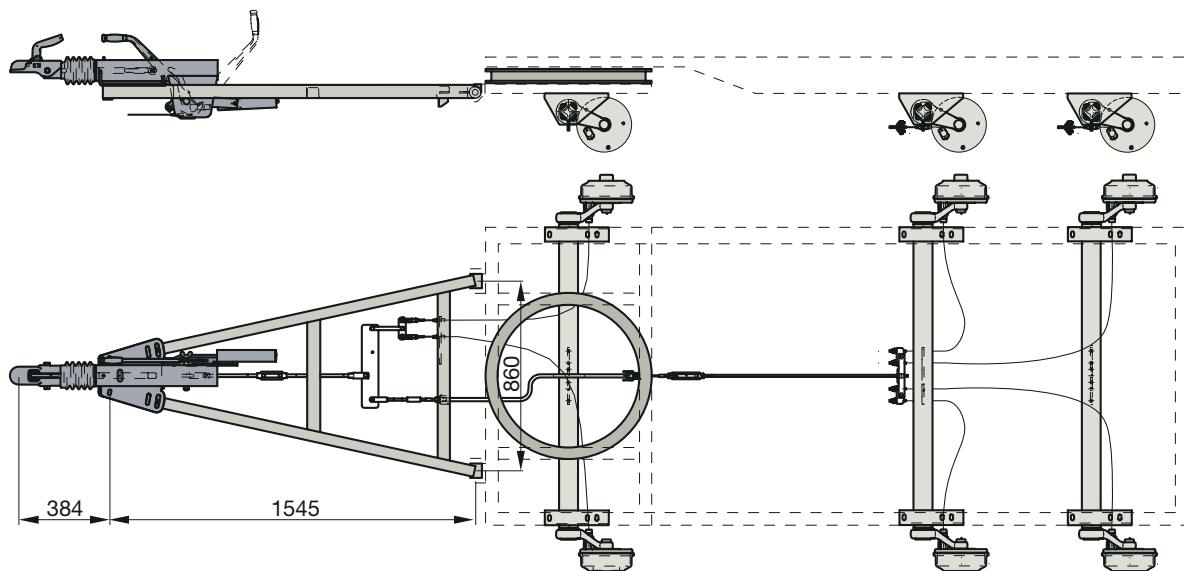

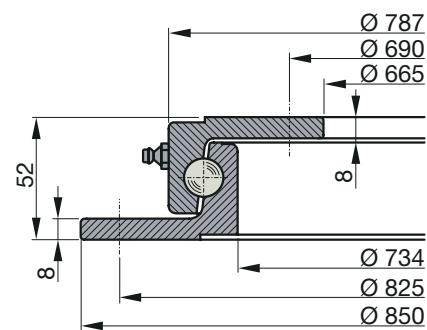

BPW supplies the complete undergear with fifth wheel for special requirements. Available as either 2 or 3-axle configuration.

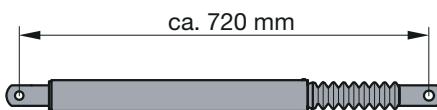

2.8 Running gear technology for turntable drawbar trailers

05.447.09.13.0 (Drawbar)

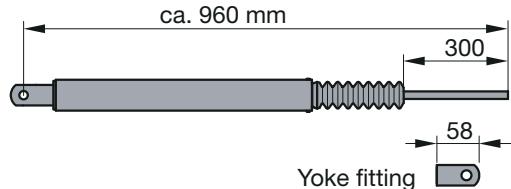

05.002.02.04.0 (Turntable)

51.98.01.0013 Klemmfix 72/Z (Tension)

51.98.01.0015 Klemmfix 72/D-PAL (Compression)

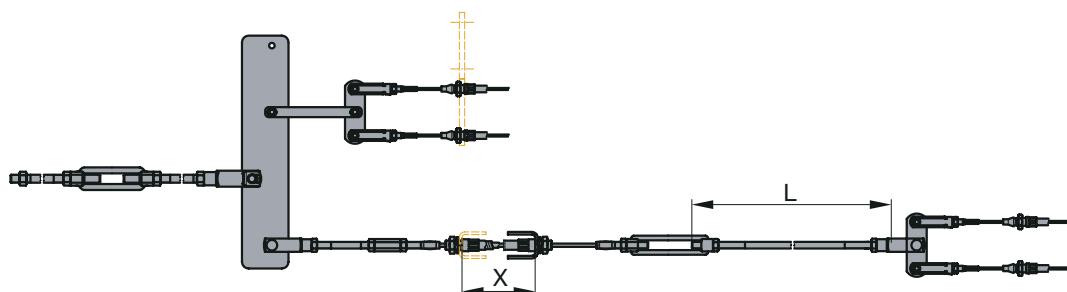

51.98.01.0014 Klemmfix 72/D (Compression)

Following the introduction of the EU driving licence, the restriction on the axle centre distance and the number of axles for car and light truck trailers has been lifted. This means it is now possible to use turntable drawbar trailers with overrun brakes for both cars and light trucks. Multiple axle trailers have the following advantages over twin or single-axle trailers:

- Simple load distribution due to variable wheelbase
- Long vehicle bodies can be accommodated
- Safe driving characteristics as the effects of drawbar load and load distribution no longer apply
- Drawbar remains at the required height due to the BPW Klemmfix height setting and retaining fixture
- Accessories such as a jockey wheel and support legs are not required.

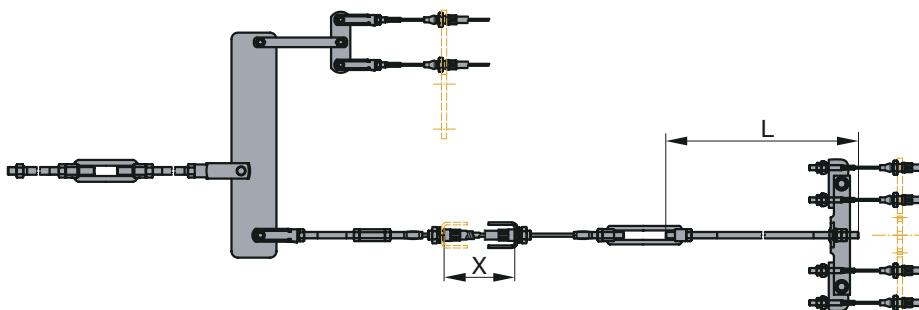

Connection of brake linkage in twin-axle turntable drawbar trailer

Pull rod group 05.439.44.14.0

Axle load	Towing attachment	Wheel brake
2650 – 3000 kg	ZAF 3.5 – 1 (48.51.581.010)	Standard axle 1500 kg, CB1505 with wheel brake S 2005 – 7 RASK
2400 – 3500 kg	ZAF 3.5 – 1 (48.51.581.012)	Standard axle 1800 kg, CB1805 with wheel brake S 2504 – 7 RASK

Connection of brake linkage in three-axle turntable drawbar trailer

Pull rod group 05.439.40.88.0

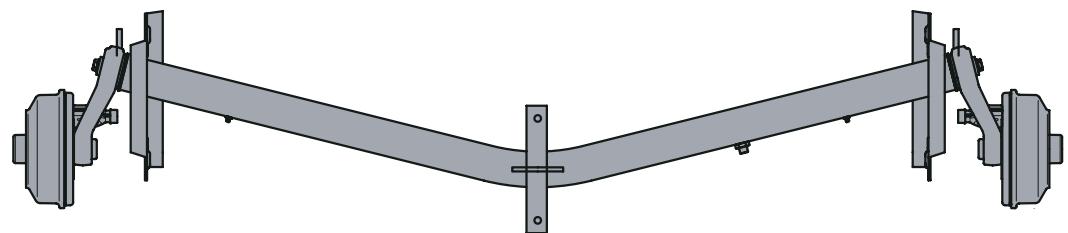

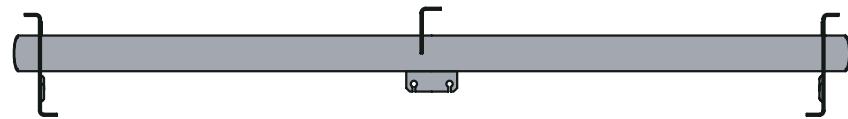

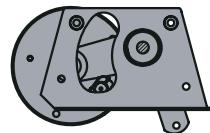

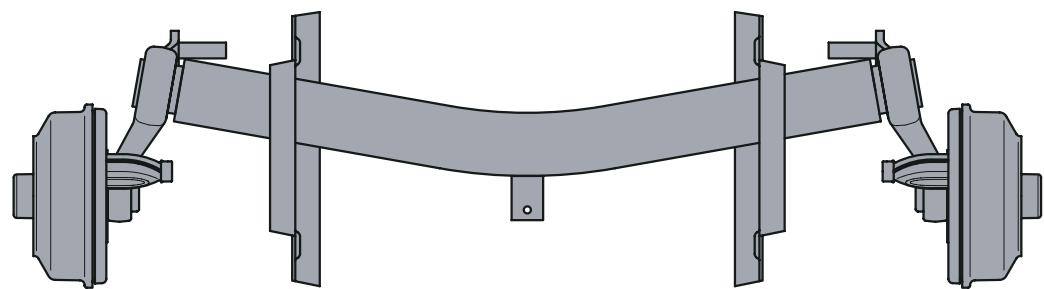

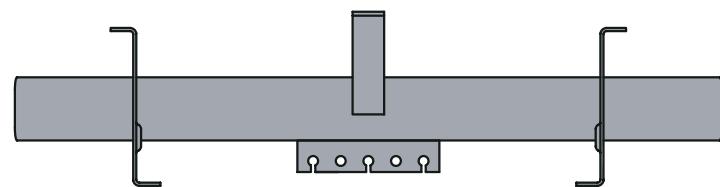

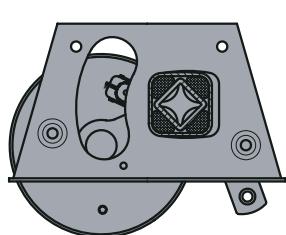

Axle load	Towing attachment	Wheel brake
2650 – 3000 kg	ZAF 3.5 – 1 (48.51.581.010)	Standard axle 1350 kg, CB1305 with wheel brake S 2005 – 7 RASK

Brake cables for two and three-axle turntable drawbar trailers

Brake cable	Envelope X	Cable	Pull rod	Length L
05.089.00.59.0	2030 mm	2330 mm	03.399.59.49.0	2000 mm
05.089.00.61.0	1630 mm	1930 mm	03.399.59.50.0	2500 mm
05.089.00.63.0	1250 mm	1550 mm	03.399.59.51.0	3000 mm

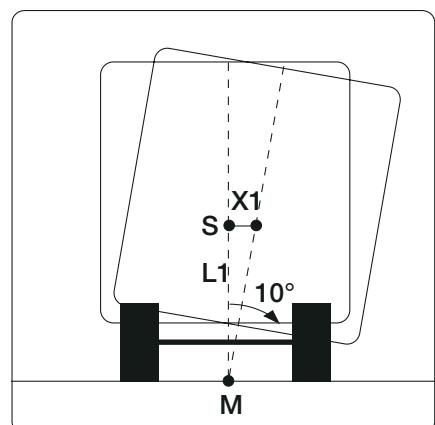

2.9 SWING V^{tec}/RONDO V^{tec} semi-trailing-arm axles

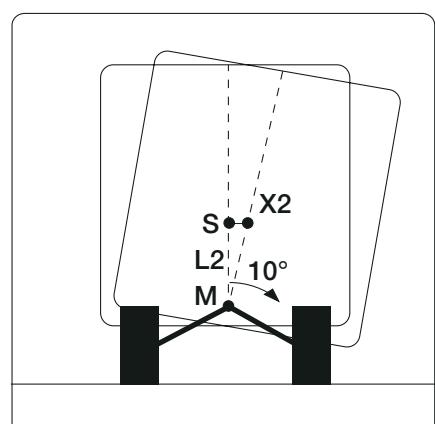

A BPW speciality for caravans with unique levels of driving stability and anti-roll properties. Camber and track dynamically adapt to the particular driving situation. Instability is significantly reduced in driving situations such as cross-winds and overtaking. The greater safety margins are really apparent if sudden evasive manoeuvres are required.

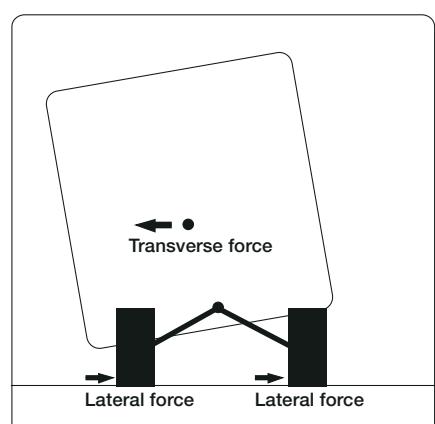

Conventional axles react to a 10° swerve with a roll travel (X1) which leads to severe swaying.

The semi-trailing-arm axle transfers the roll axis area upwards closer to the centre of gravity. The reduced roll travel (X2) and the shortened lever arm mean that swaying movements are also reduced.

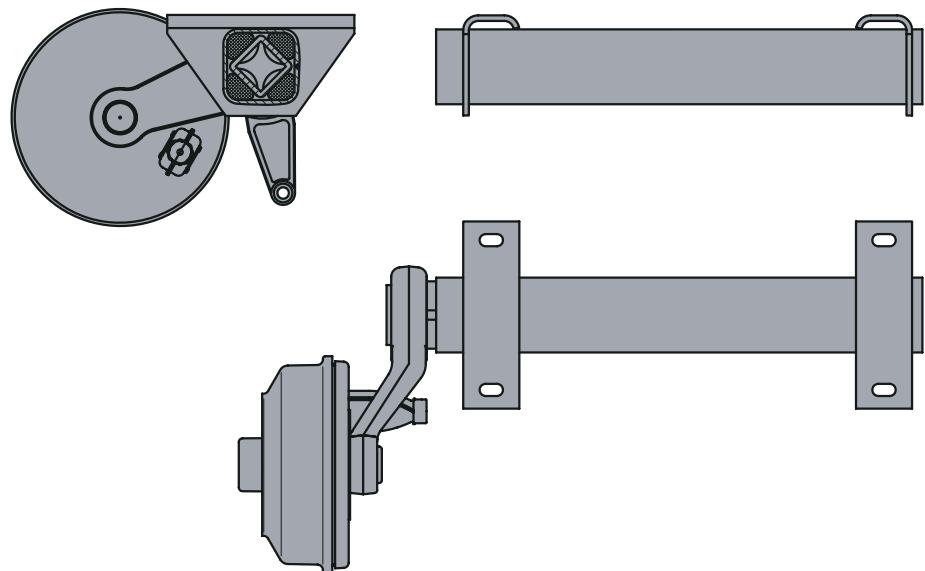

Whenever transverse force arises, pendulum movements are cushioned better and the wheels set themselves against the lateral forces. This supports tracking stability and improves cornering properties.

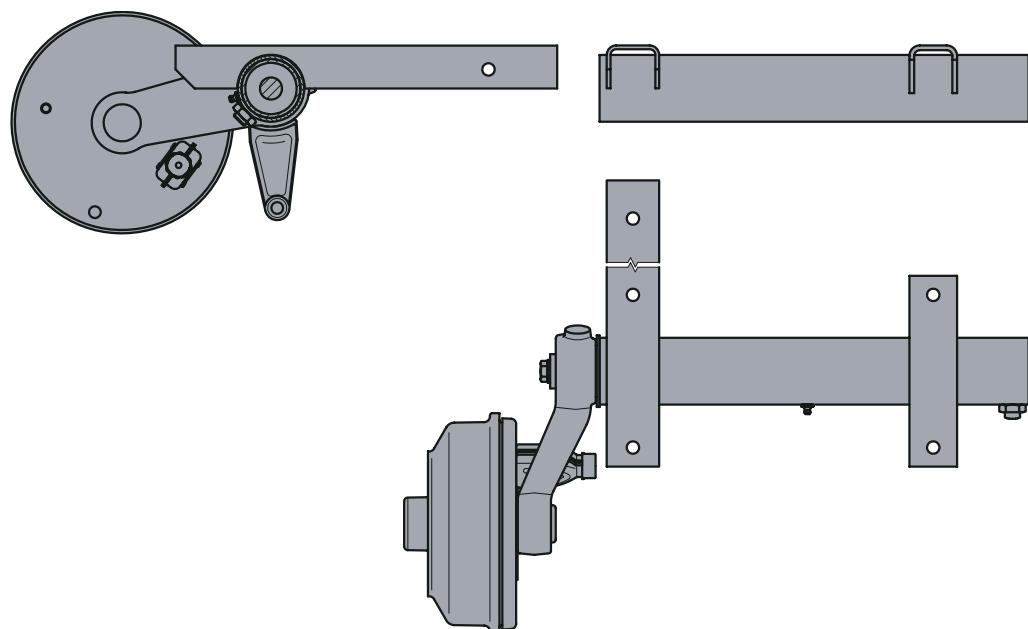

2.10 SWING rubber suspension half axles, braked

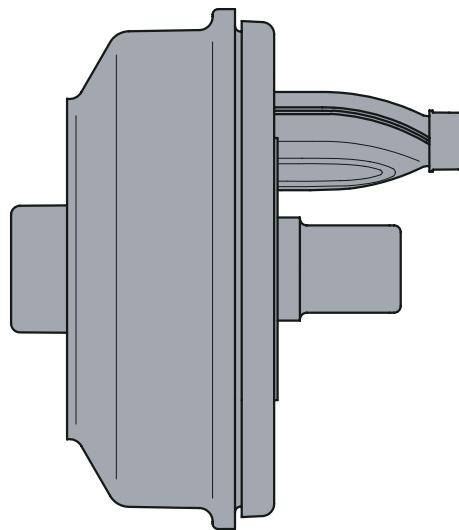

2.10 RONDO torsion bar half axles, braked

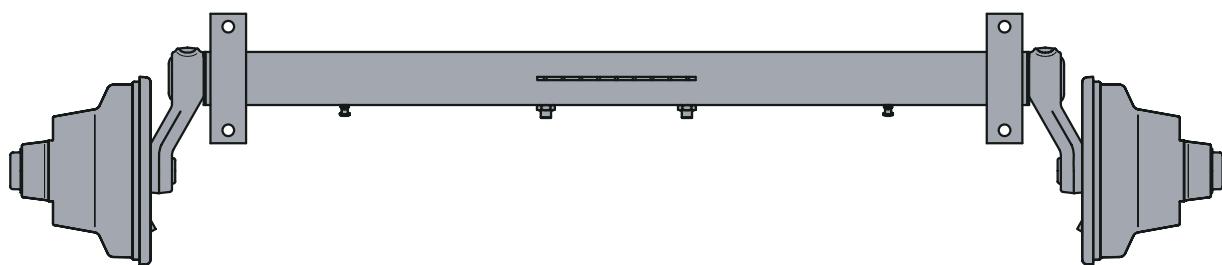

BPW axle stubs and half axles give vehicle manufacturers the highest levels of flexibility in selecting the required support clearance.

2.11 Axle stubs

2.12 RONDO torsion bar axles, braked for 8" tyres

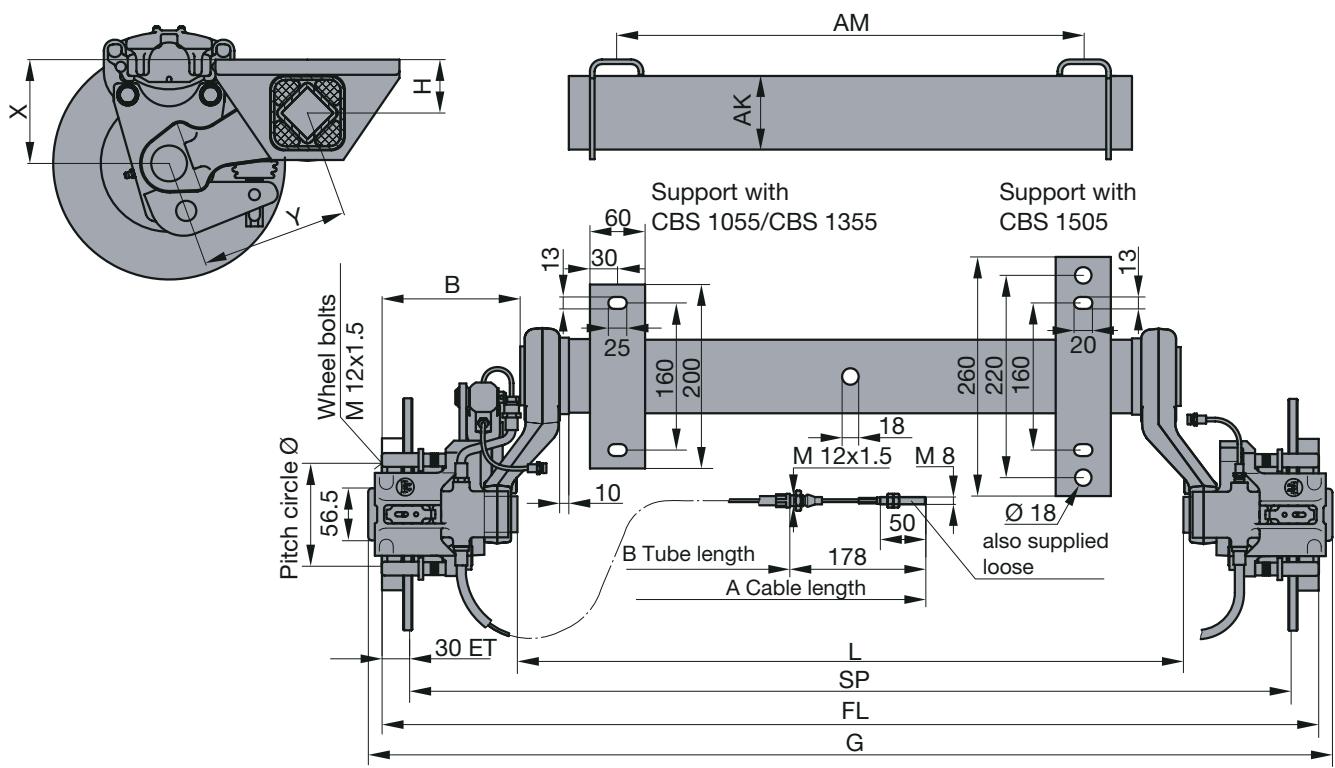

2.13 SWING rubber suspension axle, with disc brake SB 2510 RA, axle load up to 1500 kg

Dimensions [mm]

CBS 1505	133	74	44	65	162	200	95

Tyres: 5 1/2 J x 14

A first-class product with quality levels only available from BPW. This system solution combines outstandingly robust and easy-to-maintain rubber suspension with the latest brake technology. The advantages of the disc brake at a glance:

- Optimum brake harmonisation
- Smoother brake response
- Braking comfort and response similar to that of a car
- Shorter braking distance
- Automatic brake adjustment
- Low thermal fading
- Simple to maintain as the brake pads are easy to check and replaced

Brake linkage assembly components for tandem axle trailers, incl. tandem compensation for parking brake system must be adapted accordingly.

2.14 Tandem units with hydraulic raise and lower

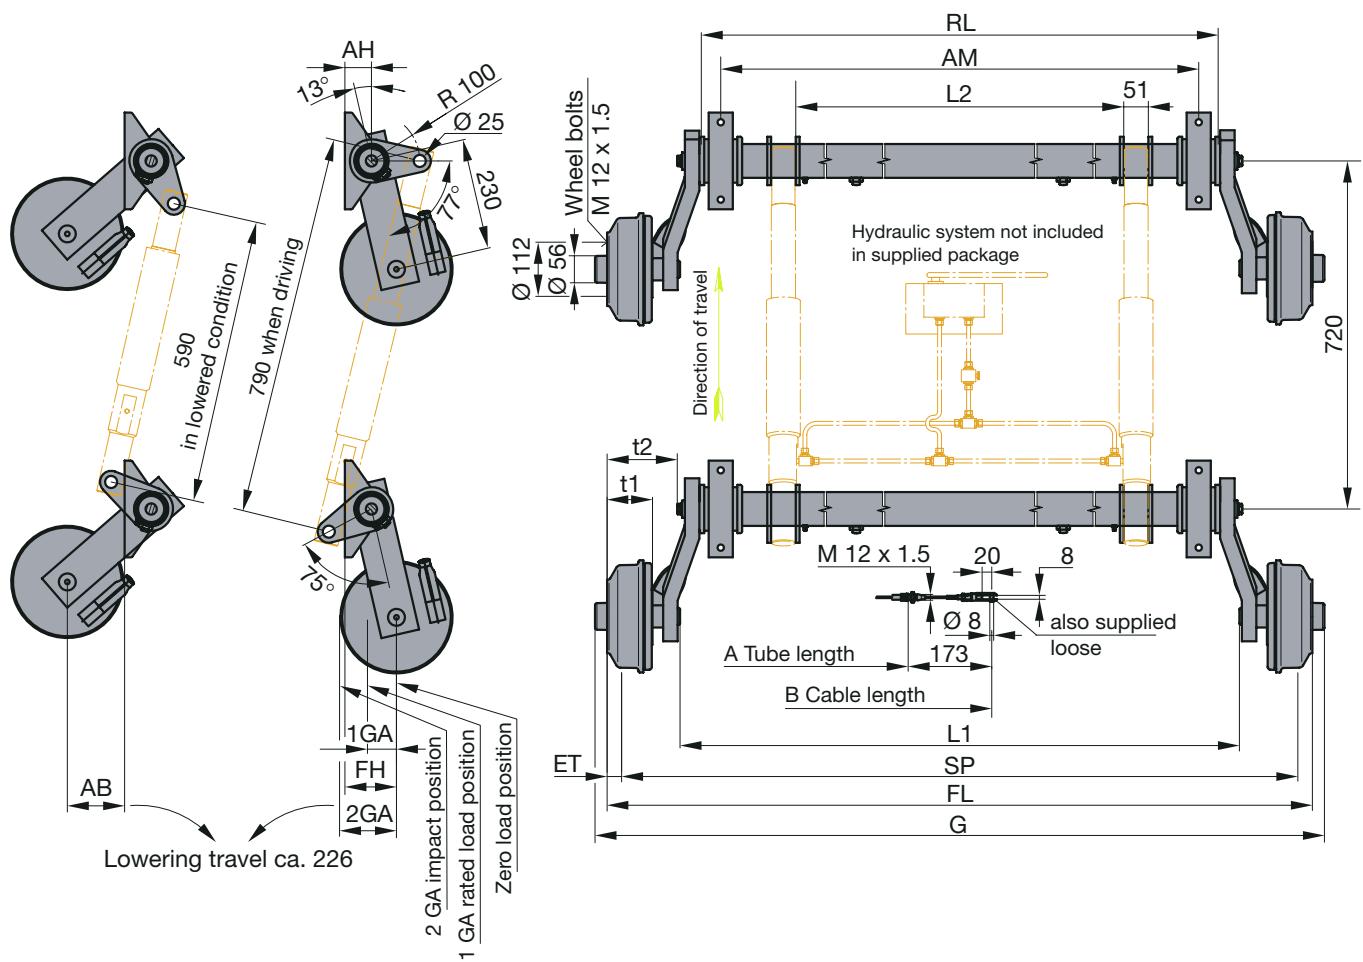

- Torsion bar axles with independent suspension: Optimum compensation for uneven road surfaces and high levels of driving stability
- Almost infinitely variable swinging arm setting: Variable ride height setting to suit vehicle construction
- Raise and lower function uses easy-to-operate hydraulic lift ram with hard chromium-plated piston rods, either electrically (12 V) or manually controlled
- Locked ride height using non-return valve which can be released: High safety levels, even if the hydraulic system fails
- Vehicle is lowered by releasing the hydraulic pressure
- Lowers by up to 200 mm: Simple loading and unloading, low counter heights for market vehicles

Application:

- Chassis conversions (hydraulic brake system, optionally with ABS)
- Semi-trailers (hydro-pneumatic brake system)
- Drawbar trailers (mechanical brake system with overrun brakes)

2.15 Tandem units with air suspension

- 100 percent air suspension: Payload protection when transporting fragile goods, high levels of road safety and the greatest possible driving comfort
- Independent suspension: Optimum compensation for uneven road surfaces
- Additional stabiliser as mechanical link for the air suspension: High levels of road safety when cornering and under extreme driving conditions, reduced tyre wear due to uninterrupted road contact
- High-performance shock absorbers with lengthened rebound travel: Dampened rebound reduces the stress on the cargo
- Fully automatic level control using an electronically controlled air suspension valve, ECAS control electronics (Electronically Controlled Air Suspension): Constant trailer ride height, independent of loading condition
- Raise and lower function (lowering max. 85 mm / raising max. 45 mm) Low loading surfaces and loading heights, low counter heights in market vehicles, loading ramp adjustment, lowering on one side only is also possible
- ALB control by the operating pressure in the air bags (pressure-dependent control)

If you are looking for a reliable advantage in terms of function and performance, you cannot afford to overlook this tandem unit. It offers particular benefits in transport trailers for fragile goods, in market vehicles, boat trailers and for chassis conversions for front-wheel drive vehicles

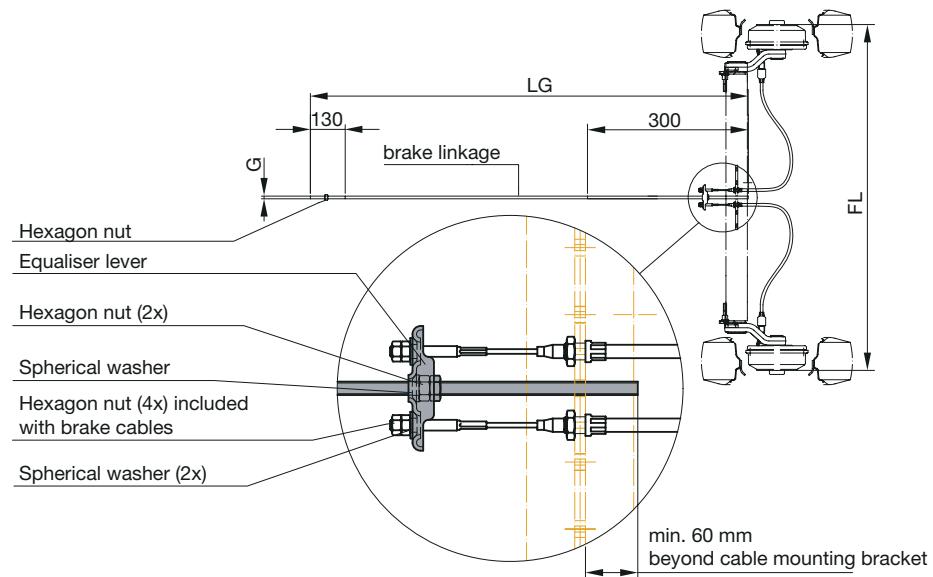

The BPW range of accessories:

For towed machinery, car and light truck trailers, caravans and chassis conversions for front-wheel drive vehicles

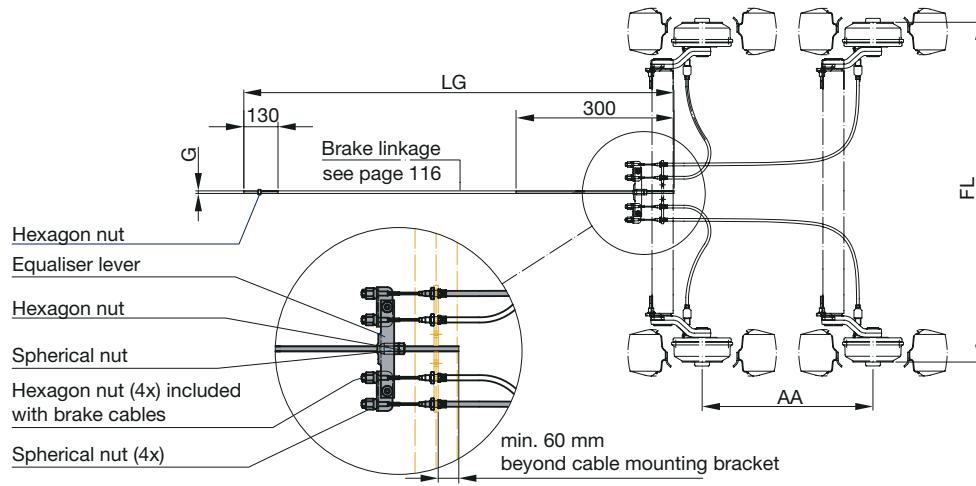

3.1 Brake cables, linkages and equaliser assemblies

Assembly parts group equaliser lever single-axle trailer for brake linkage M 10, order no. 05.803.18.38.0

For maximum safety and even greater ride comfort – shock absorbers optimally adapted to the weight ranges, to protect both vehicle and load.

3.7 Shock absorbers

BPW comfort shock absorbers:

Shock absorbers that are specifically adapted to the individual weight ranges – for a noticeable difference in driving comfort and road safety.

Safety:

Damping is optimally adapted to the weight ranges.

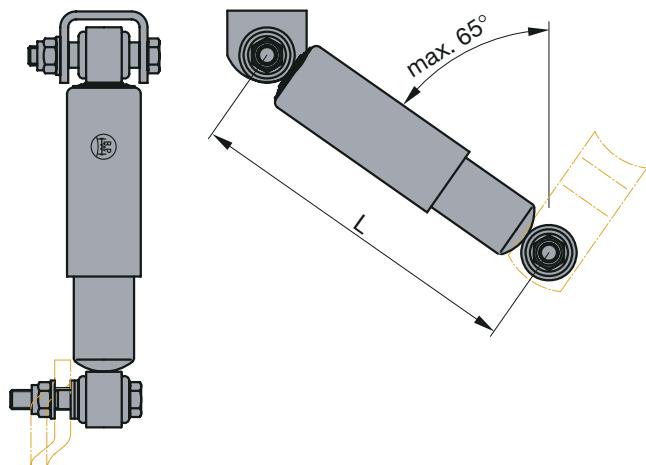

Driving comfort:

Better shock absorption in all loading conditions.

Road safety:

Optimum contact with the road surface by minimising body vibrations

- Greater braking stability
- Shorter braking distance

Comfort shock absorber parts kit SWING rubber suspension axles (incl. shock absorbers, attachment for vehicle frame and assembly parts kit)

BPW order no.	Identification	Weight ranges	Dimensions [mm]		
05.803.00.60.0	red	550 kg – 1050 kg Axle load	L min = 237	L max = 337	Installation dimension approx. 245
05.803.00.61.0	blue	1050 kg – 1350 kg Axle load	L min = 237	L max = 337	Installation dimension approx. 245
05.803.00.62.0	black	1350 kg – 1800 kg Axle load	L min = 237	L max = 337	Installation dimension approx. 245
05.803.00.63.0	black	1800 kg – 3000 kg Axle load	L min = 270	L max = 412	Installation dimension approx. 280

Comfort shock absorber parts kit RONDO torsion bar axles (incl. shock absorbers, attachment for vehicle frame and assembly parts kit)

BPW order no.	Identification	Weight ranges	Dimensions [mm]		
05.803.00.62.0	black	1050 kg – 1800 kg Axle load	L min = 237	L max = 337	Installation dimension approx. 245
05.803.00.63.0	black	1800 kg – 3000 kg Axle load	L min = 270	L max = 412	Installation dimension approx. 280

The universal shock absorber: For weight ranges up to 1500 kg axle load

Universal shock absorber parts kit (incl. shock absorbers, attachment for vehicle frame and assembly parts kit)

BPW order no.	Identification	Weight ranges	Dimensions [mm]		
05.803.00.58.0	black	550 kg – 1500 kg Axle load	L min = 257	L max = 385	Installation dimension approx. 270

The safety hitch with track stabilisation and a single-lever system, in a class of its own.

3.8 WS 3000 safety hitch

Allows all operations to be carried out using only one hand:

- Hitching up
- Unhitching
- Deploying stabilisers
- Retracting stabilisers
- Locking and unlocking
- Short design
- Low service weight
- Replaceable friction pads
- Anti-theft protection can be retrofitted

More clearance at the rear of the vehicle

Designation	Order no.	Test symbol	Permitted drawbar load [kg]	Gross vehicle weight rating [kg]	Weight [kg]
WS 3000	02.1801.19.10	e1 00-0065	150	to 3000	4.3

Anti-theft protection

Order no.

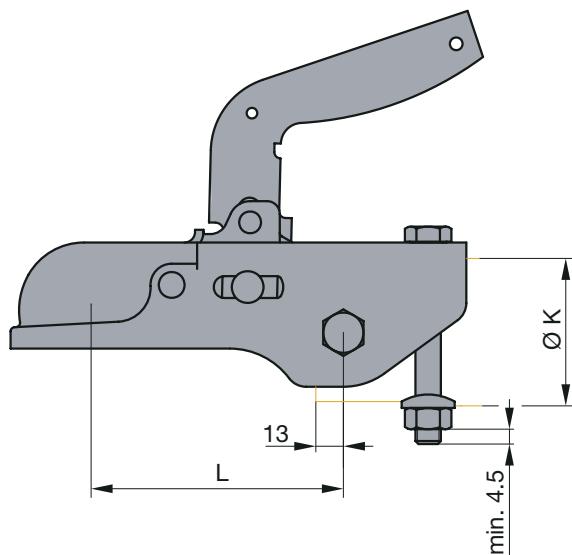

05.803.02.64.0

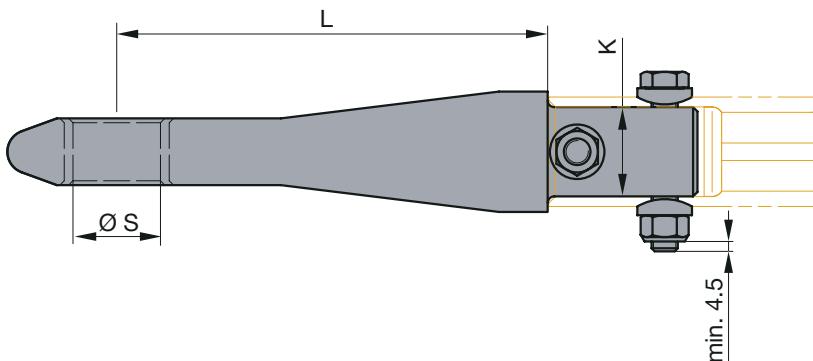

Anti-theft protection

3.9 Conversion kits for connecting assemblies

More flexibility when selecting the towing vehicle – the BPW conversion kit makes it possible. With this, BPW connecting assemblies can be operated with a ball hitch and a towing eye.

* Not for ZAV

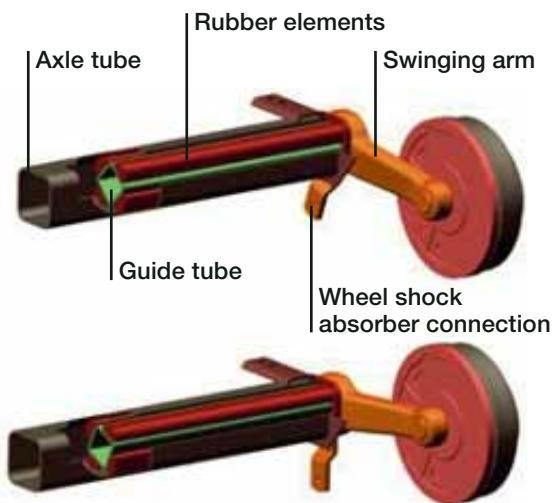

[Technical information] Expertise in running gear systems is not just expressed in terms of products, variety and quality. The method of co-operation is just as decisive for achieving outstanding results and reliable success. Which is why BPW is the right partner for vehicle manufacturers. In addition to our products, they can find the right contacts and the information they need. The most important information is presented on the following pages. As always: If you have any questions, just ask BPW.

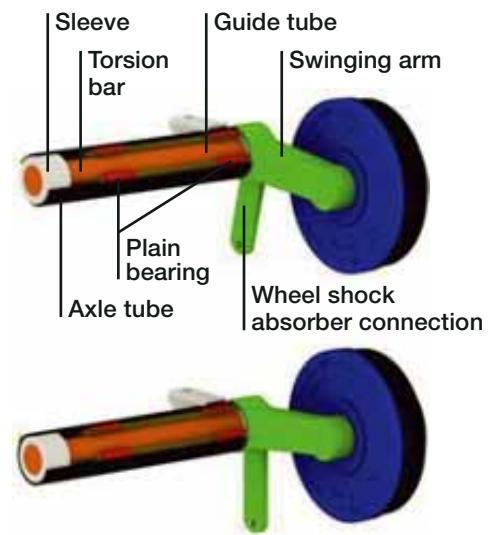

Rubber suspension axles and torsion bar axles offer the highest levels of suspension comfort. They can be adapted to a wide range of vehicle weights. Vibrations caused by uneven road surfaces are absorbed to an optimum extent. The functional principles vary according to which type is used, and this depends on the customer's requirements and the application.

4.1 SWING rubber suspension axles/RONDO torsion bar axles

SWING rubber suspension axle

RONDO torsion bar axle

Mode of operation

Suspension is provided by four rubber elements which are pressed in between the square tubes offset at 45°.

As soon as load is applied to the swinging arms, the rubber elements next to the inner tube guide provide the suspension effect.

Mode of operation

In this case, the suspension element is a torsion bar made from spring steel. This is mounted inside the axle tube where it is fully protected.

Almost infinitely variable setting of the swinging arms is possible using the involute tooth profile on the torsion bar.

Advantage: Ride height setting can be adjusted during vehicle construction.

For spring deflection, see the spring deflection diagrams in the Axles & Axle Systems section.

Please note:

The axles must be suitably adapted for use in trailers having special operational conditions, e.g. hazchem trailers (wheelbase above 1000 mm), trailers for movable loads, trailers towed by coaches and light trucks.

4.2 Installing axles in tandem axle vehicles

Axe load [kg]	Gross vehicle weight rating with wheelbase (AA)		
	$\leq 750 \text{ mm [kg]}$	$\leq 850 \text{ mm [kg]}$	$\leq 1000 \text{ mm [kg]}$
2 x 750	1500	1400	1300
2 x 850	1700	1550	1400
2 x 1050	2100	2000	1850
2 x 1350	2700	2500	2300
2 x 1500	3000	2800	2700
2 x 1800	<3500	3300	3100

* In conjunction with drum hub/special version

4.4 Connecting Equipment

Connection to Towing Vehicle

In order to ensure a safe connection between the trailer and the towing vehicle the hitch must be attached correctly. The connection point of the trailer must be about 430 mm above the road surface when the trailer body is horizontal and the axle subject to its maximum load. A tolerance of 35 millimetres above or below is acceptable. Caravans and trailers are horizontal as soon as their floor or cargo bed is aligned horizontally.

Please note:

The connecting assembly must be adapted to suit trailers with special operational conditions, e.g. towed by coaches or light trucks, or vehicles with variable loading at the connection point.

4.5 BPW EC categorisation calculation according to 71/320/EEC (98/12/EC), (example)

1. Overrun hitch:

Type: AE3.5-2 /A

EC inspection report no. AR 1027

Selected reduction ratio iHO = 100 : 33 = 3030

2. Brakes:

Type: S 2005-7 EC inspection report no.: AR 2008

3. Transmission device on trailer:

3.1. Brief description (see block diagram)

3.2. Reduction ratio and efficiency of the transmission device:

iH1 = 1000 etaH1 = 1000

4. Trailer:

4.1. Manufacturer:

4.2. Factory brand:

4.3. Type:

4.4. Number of axles: 2

4.5. Number of brakes n: 4

4.6. Technically permitted total weight Ga :

2500	2600	2700	2800	2900	3000	3100	3200	3300	3400	3500
------	------	------	------	------	------	------	------	------	------	------

4.7. Permitted tyre radius under load [m] : (Rmin = 0.260 m, Rmax = 0.350 m)

0.350	0.350	0.350	0.350	0.350	0.350	0.000	0.000	0.000	0.000	0.000
-------	-------	-------	-------	-------	-------	-------	-------	-------	-------	-------

4.8. Permitted thrust on coupling: $D^* = 0.1 \cdot Ga \cdot g$ [N]

2453	2551	2649	2747	2845	2943	3041	3139	3237	3335	3434
------	------	------	------	------	------	------	------	------	------	------

4.9. Braking force required: $B^* = 0.5 \cdot Ga \cdot g$ [N]

12263	12753	13244	13734	14225	14715	15206	15696	16187	16677	17168
-------	-------	-------	-------	-------	-------	-------	-------	-------	-------	-------

4.10. Required braking force taking account of rolling resistance: $B = 0.49 \cdot Ga \cdot g$ [N]

12017	12498	12979	13459	13940	14421	14901	15382	15863	16343	16824
-------	-------	-------	-------	-------	-------	-------	-------	-------	-------	-------

We require the following information in order to produce an EC categorisation calculation:

- Type of overrun hitch, e.g. AE3.5-2
- Type of wheel brake, e.g. S 2005-7
- Single or tandem axle trailer (= number of wheel brakes)
- Gross vehicle weight rating of the trailer, e.g. 3500 kg
- Tyres used, e.g. 175 R 14

5. Compatibility– test results:

5.1. Response threshold $100 \cdot K_a / (G_a \cdot g)$: (must be between 2 and 4)

4.0	3.8	3.7	3.5	3.4	3.3	3.2	3.1	3.0	2.9	2.8
-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----

5.2. Maximum force (retardation) $100 \cdot D_1 / (G_a \cdot g)$: (single-axle: <10, multiple-axle: <6.7)

10.0	9.6	9.2	8.9	8.6	8.3	8.1	7.8	7.6	7.3	7.1
------	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----

5.3. Maximum force (in forward direction) $100 \cdot D_2 / (G_a \cdot g)$: (must be between 10 and 50)

26.3	25.2	24.3	23.4	22.6	21.9	21.2	20.5	19.9	19.3	18.8
------	------	------	------	------	------	------	------	------	------	------

5.4. Technically permitted total weight for the overrun hitch: $G_{max} = 3500 \text{ kg } (>= G_a)$

5.5. Technically permitted total weight for all brakes of the trailer: $G_b = n \cdot G_{bo} = 3000 \text{ kg } (>= G_a)$

5.6. Maximum braking torque $n \cdot M_{max} / (B \cdot R)$: ($>= 1.2!$)

2.3	2.2	2.1	2.0	2.0	1.9	-	-	-	-	-
-----	-----	-----	-----	-----	-----	---	---	---	---	---

5.7. Mechanical transmission device:

5.7.1. $i_H = i_{HO} \cdot i_{H1} = 3030 \cdot 1000 = 3030$

5.7.2. $\eta_{aH} = \eta_{aHo} \cdot \eta_{aH1} = 0.850 \cdot 1000 = 0.850$

5.7.3. $(B \cdot R/\rho + n \cdot P_o) / ((D^* - K) \cdot \eta_{aH})$: (must not be greater than i_H)

2.91	2.89	2.86	2.84	2.82	2.80	-	-	-	-	-
------	------	------	------	------	------	---	---	---	---	---

5.7.4. $s' / (sB^* \cdot i_g) = 3546$ (must not be less than i_H)

6. Testing authority:

7. The brake system described above complies with the regulations of sections 3 to 9 of the inspection conditions for vehicles with overrun brakes.

4.6 Table of tyres and wheels

5. Development partnerships/services

Successful development partnerships are nothing new to us at BPW. To ensure that running gear designs are created for specific models with the highest levels of driving comfort and safety, we sit down with the vehicle manufacturer first and define the specifications. Only then do we start the design. If you like, we can test each chassis until it is ready for series production. We can draw up a load profile for new developments on request. We drive across off-road terrain to establish the limits of the static and alternating loads. We ascertain the yaw moment of inertia, which means the moment of inertia of the trailer about its vertical axis. And we drive on individual routes to test how well the running gear and the body are harmonised. We optimise and document everything down to the last detail. The result: Chassis and performance characteristics which comply with all national regulations and laws. With BPW, everyone plays it safe.

Together, we're better. We've been living this philosophy for more than a century.

Each and every chassis from BPW benefits from more than a century of experience. And it is suitable for an extremely wide range of applications. You can take this as read. And you can be equally confident that we will come up with solutions for unusual requirements as well. For every situation, we can offer optimum driving characteristics.

It is the expert staff at BPW and their co-operation with customers that make partnerships between vehicle manufacturers and BPW so valuable. Relations are characterised by an open dialog with the objective of meeting all the criteria, demands and requirements in the specifications to an optimum degree. That also means thinking about economic efficiency, subsequent servicing and serviceability. And that's where BPW really comes into its own – both in terms of specifics and generalities.

The best starting point for an optimum chassis: BPW consultants know their technology, the industry and their customers.

[Rolf Ehrengreuber, CEO of Gelber Blitz Furniture Movers]: "In my furniture delivery business, I use an inclined conveyor which can be deployed up to 20 metres – and that's no mean feat for the chassis. For driving, the lift transforms into a long vehicle, which I've got to be able to tow safely – and I can. In my work too, the BPW chassis forms a mobile base which is equal to any challenge."

[Wolfgang Koch, building contractor]: "As a building contractor, I've often got to have a machine available at several sites. That's when mobility really pays off. As a result, we need reliable trailers for our construction machinery. They've got to be especially robust and they also need to take cope with some rough ground from time to time."

[Dirk Scholz, CEO of Scholz Automotive Repairs]: "For me, getting a job is very dependent on how quickly I can carry out the service or a repair. With BPW, I've got a partner who enables me to provide assistance quickly at all times. As well as the quality of their products, the excellent availability of spare parts is a particular strength of BPW."

[Volker Koch, Technical Director of Johanniter Emergency Services]: "Johanniter are renowned for acting quickly. When we get a call out, we transport our heavy rescue equipment on the trailer. We have to work fast, so vehicles are often swapped around. That's where BPW's adjustable height connecting assembly comes into its own. It's just as fast as our team."

A company that builds running gear systems for the world market must be available to its customers worldwide.

BPW Service keeps you moving wherever you may be. It's available worldwide.

For running gear technology without any weakness – Always fit genuine BPW spare parts and be on the safe side.

Our products are driven all over the world. As a result, it's natural for us to be represented globally through our production facilities, sales subsidiaries, branches and dealerships. Wherever you see BPW running gear in service, there's a BPW agent close at hand who speaks your language and is ready to help you. You can find out where your local contact is by visiting www.bpw.de on the Internet.

Service starts at BPW even before our products reach their customers. Product training courses, analyses of global and local market trends and development of products to set new standards – BPW will keep you out in front. This also applies to our delivery performance: With our modern Logistics Centre we deliver products precisely in line with our customers' production requirements. And parts logistics ensures levels of availability which are unparalleled anywhere else in the industry.

To ensure high levels of availability, we use the latest technology in the BPW Logistics Centre and we're constantly optimising our processes in line with the latest developments.

There's one thing that's understood everywhere. BPW quality.

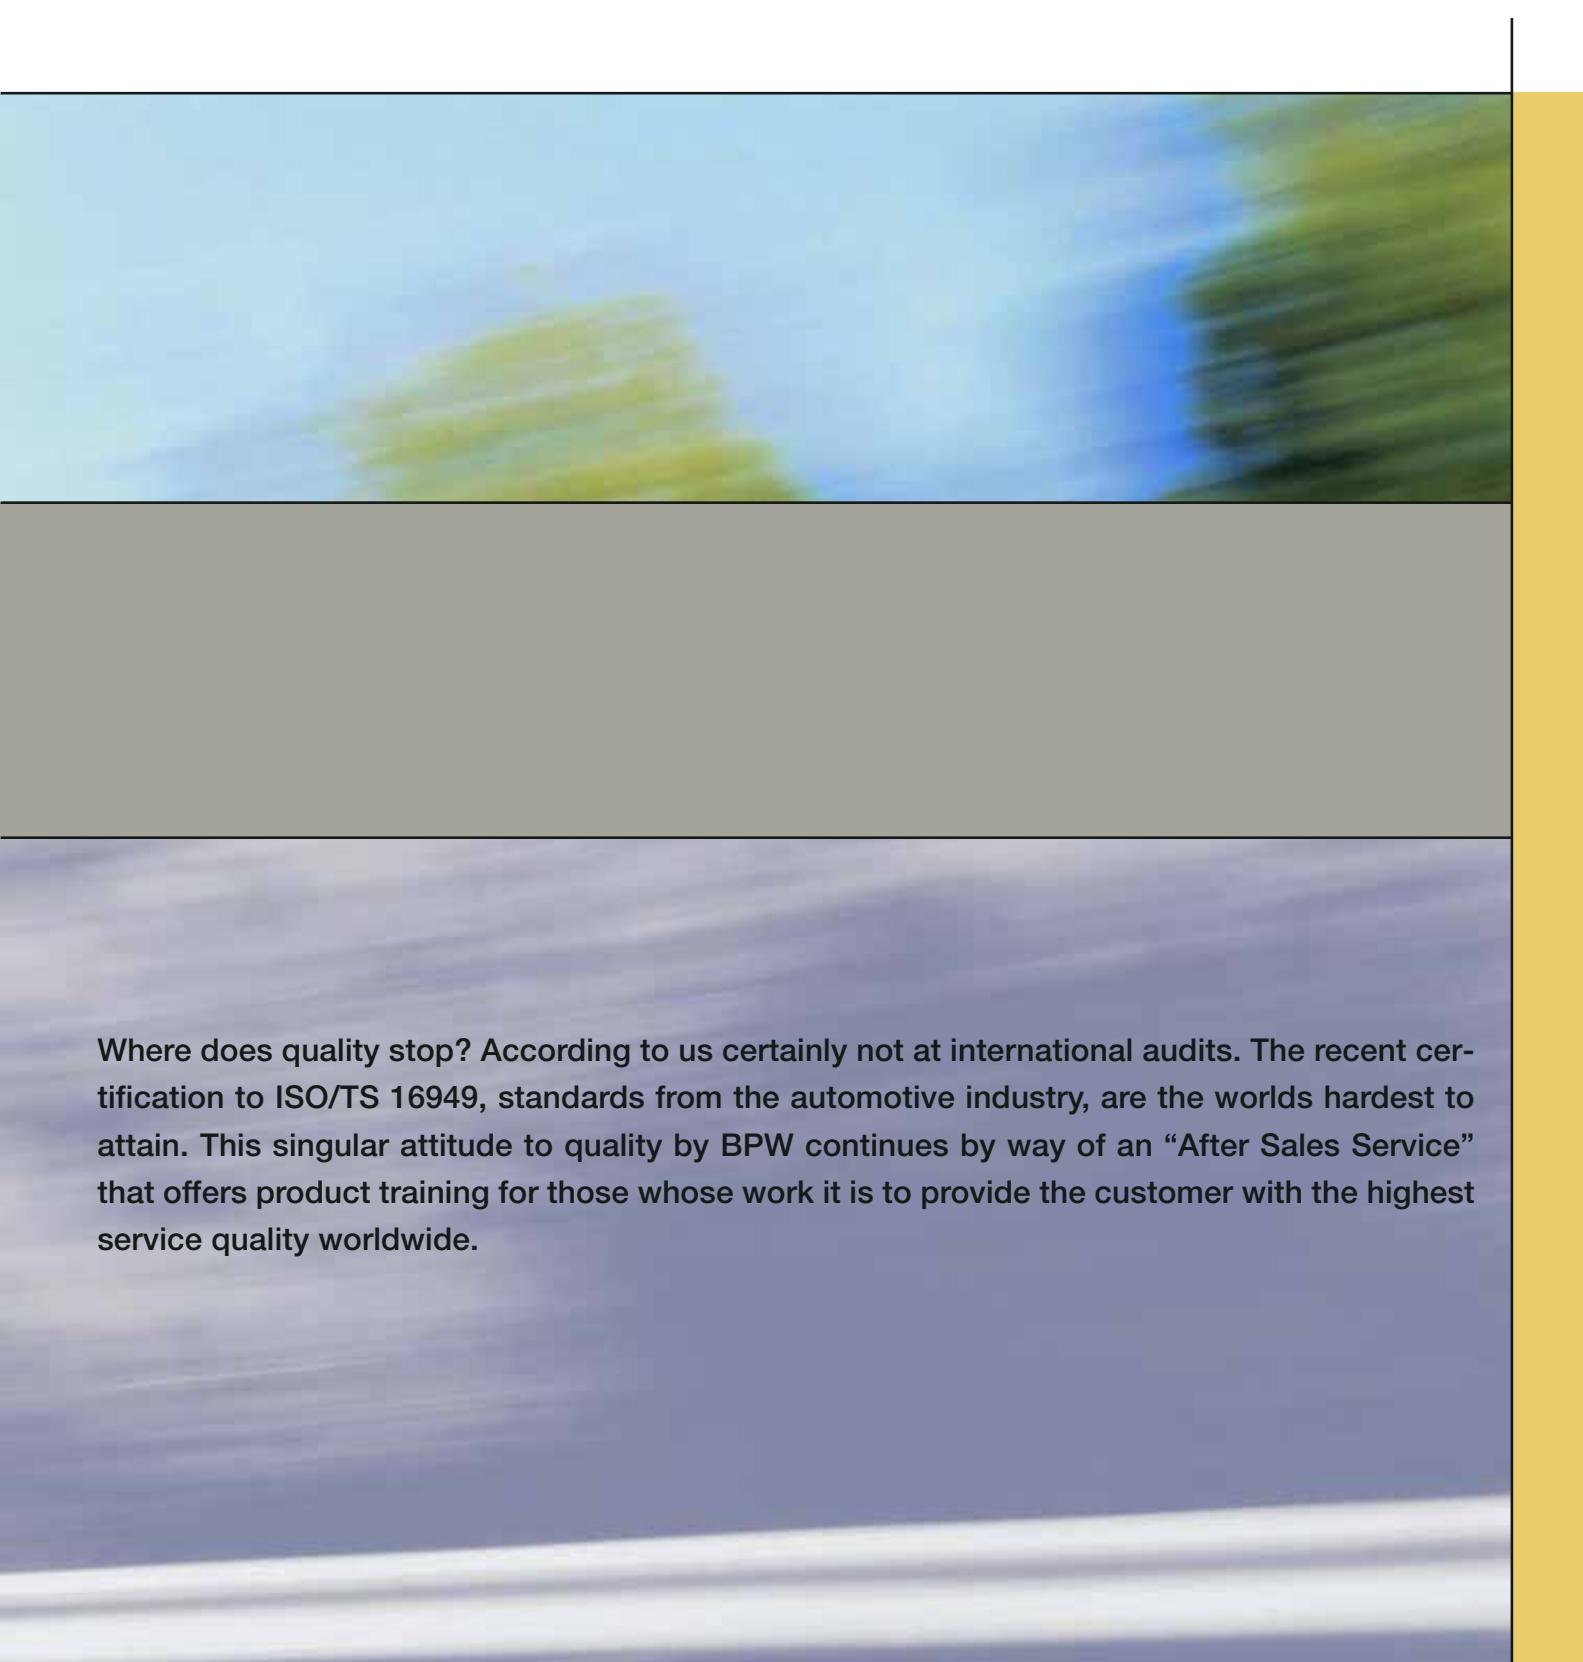

Where does quality begin? It begins with targeted development and design, which includes the setting of quality standards. The next link in the quality chain is the production operation itself. Here, BPW employs the very latest methods, such as, for example, laser-cutting technology. This precision is something you simply have to experience – with running gear engineering from BPW.

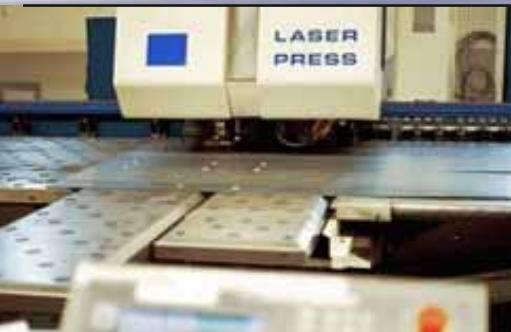

The home of well thought-out system solutions: The parent plant in Wiehl, Bergische Land, with its research and development centre.

The plant in Paderborn: A fully owned subsidiary producing 100% BPW quality – to internationally acknowledged standards.

Where does quality stop? According to us certainly not at international audits. The recent certification to ISO/TS 16949, standards from the automotive industry, are the worlds hardest to attain. This singular attitude to quality by BPW continues by way of an "After Sales Service" that offers product training for those whose work it is to provide the customer with the highest service quality worldwide.

The production by BPW has evolved with over 100 years experience in chassis technology.
