Introduction

Dexter Axle is proud to put control and peace of mind in hauling a trailer or caravan back into your hands with the Dexter Sway Control System. This critical safety device automatically stabilizes the sway of a trailer. It works independently of the tow vehicle and automatically applies the trailer or caravan brakes in the event of a sway.

As you are driving, the Dexter Sway Control System is constantly monitoring trailer yaw, or side-to-side movement, quickly recognizing and adjusting for sway conditions.

This manual is designed to provide information for you to understand, use, and guide you through the process of installing, operating, and maintaining your Dexter Sway Control System.

Assembled in the USA by Tuson RV Brakes, LLC.

Dexter Sway Control Mounting

DSC Mounting Location

Select a location on the trailer to mount the DSC. The location must be 5 to 10 feet behind the trailer bumper hitch ball and shielded from road debris. The DSC must be securely fastened onto a vertical surface that does not flex or move from wind, such as plastic covers or plastic walls. The center of the DSC (marked by a red dot on the DSC label shown below) must be positioned on the “center line” of the trailer and the DSC must be mounted with the correct side in the UP direction as indicated on the label. The longest edge of the DSC (as indicated by a red line on the label) must be mounted parallel to the trailer axle beam(s). See Figure 1.
It is essential that the DSC be oriented in the proper direction when it is installed.

**CAUTION**

Ensure the electric brakes are adjusted and maintained in accordance with the manufacturer’s recommendations in your owner’s manual for proper operation of the sway control module.

**Mounting Hardware**

The DSC should be mounted using the mounting flanges which are located on both sides of the unit. Included are six (6) #10 self tapping screws with star lock washers to mount the DSC to the trailer. It is recommended that star lock washers be used and you must securely tighten the mounting bolts to hold the DSC firmly in position and to avoid becoming loose from vibration.

You must **NOT** drill holes in the DSC for any reason. Drilling holes or puncturing the unit **VOIDS YOUR WARRANTY**.

**CAUTION**

Do not spray high pressure water on the DSC. The DSC is a weather sealed water resistant unit, but it is not designed to withstand direct high pressure spray from a power washer.
Figure 1

It is essential that the DSC be oriented in the proper direction when it is installed.
**Trailer Battery**

The trailer must be equipped with a full size 12 volt battery. Small, gel-cell type batteries must not be used with the DSC.

Dexter Sway Control Wiring

---

DSC Wiring
Ground Connections

The tow vehicle ground, trailer battery ground, trailer frame ground, DSC ground (white) wire and the electric brake ground wires on both sides of the trailer, must all be securely connected together with 14 gauge wire (min.) in order for the DSC to function properly.

Figure 3
12 Volt Connections

The tow vehicle 12 volt charge line, the 12 volt trailer battery terminal and the DSC 12 volt (black) wire must be securely connected together with 14 gauge wire (min.) in order for the DSC to function properly. The “hot” wire from the breakaway switch must be connected to the +12V terminal of the trailer battery.
Electric Brake (Blue Wire) Connections

The tow vehicle brake controller signal (blue) wire must be securely connected to the DSC brake signal (blue) wire as well as to the “cold” wire from the breakaway switch as shown in the wiring diagram.
**Left and Right Side Brake Wires**

The DSC operates the left and right side trailer brakes independently in order to control trailer sway and therefore it is very important that the correct DSC wires are connected to the correct side brakes. The DSC purple wire must be connected to the left side electric brakes with a 14 gauge (min.) wire. The DSC pink wire must be connected to the right side electric brakes with a 14 gauge (min.) wire. Failure to properly connect these wires will prevent the DSC from controlling trailer sway.

![Diagram of Dexter Sway Control Wiring](image-url)

**Figure 6**
Wire Connections to Trailer Plug and System Overview

The DSC mounts on the center line of the trailer, 5 to 10 feet back from the trailer hitch ball on a VERTICAL frame surface.

Figure 7
The DSC wire harness has five wires requiring electrical connection and one wire for the status LED light. The function of each of these wires is outlined in the table below:

<table>
<thead>
<tr>
<th>DSC Wires</th>
<th>Trailer Wire Function</th>
<th>Wire Gauge Required</th>
</tr>
</thead>
<tbody>
<tr>
<td>Purple Wire</td>
<td>Left side electric brake output (all left side brakes)</td>
<td>14 Gage Minimum</td>
</tr>
<tr>
<td>Pink Wire</td>
<td>Right side electric brake output (all right side brakes)</td>
<td>14 Gage Minimum</td>
</tr>
<tr>
<td>White Wire</td>
<td>Trailer battery/frame ground point</td>
<td>14 Gage Minimum</td>
</tr>
<tr>
<td>Blue Wire</td>
<td>Electric brake controller signal from tow vehicle</td>
<td>14 Gage Minimum</td>
</tr>
<tr>
<td>Black Wire</td>
<td>12VDC from tow vehicle trailer harness</td>
<td>14 Gage Minimum</td>
</tr>
<tr>
<td>Gray Wire</td>
<td>10’ wire with a two pin connector on the end that plugs into the LED status light</td>
<td>Included in kit</td>
</tr>
</tbody>
</table>

The 14 gauge wires of the DSC wiring harness are approximately 12" long to allow for flexibility when mounting the unit. Extensions will be required to connect unit to the trailer’s electrical wiring. When making connections to the trailer’s wiring harness, the desired termination is a solder joint. If the connection is not soldered, use the appropriate size and type of “crimp-type” weather sealed heat-shrink connectors, using the manufacturer’s recommended crimping tools in accordance with their crimping instructions.

Once the 14 gauge wires are connected, route the Status Light wire to a location on the front of the trailer and mount the Status Light Module onto a flat surface using self-tapping screws. Select a location that makes it easy to see the Status Light when looking at the front of the trailer.
Taking shortcuts when connecting any wires on your trailer only increases the likelihood that some part of your electrical system will fail. Make sure your splice connections are durable and sealed against exposure to water and corrosive elements. One loose wire connection can disable your entire trailer brake system.

When adding extension wires to the DSC wiring harness, you must use the correct gauge wire. These gauge sizes are outlined in the table above.

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Failure to use the correct gauge wire may result in poor braking performance or brake failure. Improper wire gauge may also result in significant damage to your trailer or its components, cause a fire, which may result in serious or fatal injury and/or property damage. Undersized wire will prevent electrical circuit protection devices such as fuses or circuit breakers from functioning properly. Undersized wire may melt or burn before these safety devices can be activated.</td>
</tr>
</tbody>
</table>

Dexter Sway Control Wiring
Functional Test Procedure

Testing the DSC for Correct Wiring

In order to verify that the DSC is wired correctly, follow the test process listed below:

1. Ensure that the trailer battery is fully charged or that a charging device is connected to the trailer.
2. Connect the +12V to the black wire on the DSC and ground the white wire from the DSC.
3. Connect a brake controller to the brake signal (blue) wire of the trailer harness.
4. Turn on the brake controller and apply the manual override until the DSC status light comes on.
5. Verify that the light is GREEN and that it is “flickering”. This indicates no faults with the DSC. If the light is not GREEN, refer to the troubleshooting section to correct the detected fault(s).
6. Refer to Figure 1 and Figure 2 on the following page to verify correct wiring on the left and right sides of the trailer. After the trailer passes the left side test, reconnect the left side brake as normal before repeating for the right side test.

Note: It is very important for the wire test connection to be made back near the left and right side trailer brakes. Do not perform this test up front near the DSC since that will not verify correct wiring back at the brakes.

7. If the DSC status light does not flash the correct number of times as indicated in Figures 1 and 2, make the necessary wiring changes so that the flashes match the correct side.
8. After the trailer passes the test as shown in Figures 1 and 2 and the brakes are reconnected as normal, verify that the GREEN flickering light is displayed. If it is not, refer to the troubleshooting section to correct the detected fault(s).

PINK - Brake Control

WHITE - Ground

Temporarily connect the Pink and White wire at ONE brake location and verify the status LED flashes RED 4 times

Figure 2
The DSC Status Light Module

The DSC performs a self-diagnostic test every time it “wakes up” by receiving a signal from a brake controller in the tow vehicle. The light will flash RED and GREEN approximately six times on startup and then go to GREEN. The DSC also continually monitors system parameters during operation. If the system is operating properly and no faults are detected, the GREEN light will remain ON and flicker or pulse. If a problem is detected, a RED light will flash a specific number of times to indicate the specific problem. The following Status Light and Troubleshooting table contains the meaning of the different RED and GREEN light flashes along with troubleshooting suggestions to correct the problem(s).

The DSC continues checking the fault status and keeps the RED light flashing until the fault is corrected. Once corrected, the GREEN light returns. Note that when the trailer is not moving, every 60 seconds the GREEN light will turn off for three seconds and back on. This is normal and indicates proper operation of the DSC. If the GREEN light is not turning off and on every 60 seconds while the trailer is not moving, have the DSC checked by your local service center.
# Status Light and Troubleshooting

Mount the Status Light Module in a location on the front of the trailer where the light is easily seen.

<table>

</tr>
</tbody>
</table>
How the Dexter Sway Control Works

1. The DSC continuously monitors trailer yaw.

2. It has a proprietary algorithm which is used to determine the difference between quick steering to avoid a road obstacle (or other such circumstances) and the rapid onset of a trailer swaying event.

3. It measures the angle, travel distance and speed of the lateral motion of the trailer (and other parameters) and uses this information to quickly intervene with the application of trailer brakes.

4. The processing capability of the DSC is powerful and rapid. It captures all the critical elements of the swaying condition and uses this information to predict how the event will proceed without any driver intervention.

5. It uses this data to get ahead of the event by applying the brakes on the correct side of the trailer, in a timely manner, with the proper braking level for the required duration.

6. This quickly dampens and brings the trailer sway under control.

7. The DSC is based on the same technology used in automotive vehicle stability systems.

Important
Ensure the electric brakes are adjusted and maintained in accordance with the manufacturer's recommendations in your owner's manual for proper operation of the sway control module.
Dexter Axle Limited Warranty

WHAT PRODUCTS ARE COVERED
All Dexter Axle Company (“Dexter Axle”) trailer axles, suspensions, and brake control systems excluding Dexter 6000 series Manufactured Housing Axles.

LIMITED 1 YEAR WARRANTY
As specified in Dexter Axle’s current publication “Operation Maintenance Service Manual”, grease and oil seals FOR ALL PRODUCTS have a one (1) year limited warranty from the date of first sale of the trailer incorporating such components. Except as to grease and oil seals, the following four other warranties are available.

LIMITED 2 YEAR WARRANTY
Dexter Axle warrants to the original purchaser that its axles, suspension systems, and E/H hydraulic brake actuators shall be free from defects in material and workmanship for a period of two (2) years from the date of first sale of the trailer incorporating such components.

Dexter Axle warrants to the original purchaser that its Genuine Replacement Parts shall be free from defects in material and workmanship for a period of two (2) years from the date parts were installed and serviced as specified in Dexter Axle’s current publication “Operation Maintenance Service Manual”. Grease and oil seals are the exception with a one (1) year limited warranty.

LIMITED 3 YEAR WARRANTY FOR PARTICIPATING OEMS
Dexter Axle warrants to the original purchaser of a trailer equipped with axle models D90, D100GD, D100HD, D120, or D150 and installed with properly matched Genuine Dexter Hanger and Attaching Parts Kits (HAP Kits) or Dexter Heavy Duty Suspension System (HDSS), that this combination of components shall be free from defects in material and workmanship for a period of three (3) years. The warranty period shall begin from the date of the original purchase of the trailer.

LIMITED 5 YEAR WARRANTY
Dexter Axle warrants to the original purchaser that its Nev-R-Lube® bearings and the suspension components only, of its Torflex® Axles shall be free from defects in material and workmanship for a period of five (5) years from the date of first sale of the trailer incorporating such components.
LIMITED 7 YEAR WARRANTY
Dexter Axle warrants to the original purchaser that its Predator Series® electric brake controllers shall be free from defects in material and workmanship for a period of seven (7) years from the date of purchase.

EXCLUSIVE REMEDY
Dexter Axle will, at its option, repair or replace the affected components of any defective axle, repair or replace the entire defective axle, or refund the then-current list price of the axle. In all cases, a reasonable time period must be allowed for warranty repairs to be completed. Allowance will only be made for installation costs specifically approved by Dexter Axle.

WHAT YOU MUST DO
In order to make a claim under these warranties:
1. You must be the original purchaser of the vehicle in which the spring suspension axles or Torflex® axles were originally installed.
2. You must promptly notify us within the warranty period of any defect, and provide us with the axle serial number and any substantiation which may include, but is not limited to, the return of part(s) that we may reasonably request.
3. The axles or suspensions must have been installed and maintained in accordance with good industry practice and any specific Dexter Axle recommendations, including those specified in Dexter Axle’s current publication “Operation Maintenance Service Manual.”

EXCLUSIONS
These warranties do not extend to or do not cover defects caused by:
1. The connecting of brake wiring to the trailer wiring or trailer wiring to the towing vehicle wiring.
2. The attachment of the running gear to the frame.
3. Hub imbalance, or any damage caused thereby.
4. Parts not supplied by Dexter Axle.
5. Any damage whatever caused by or related to any alteration of the axle including welding supplemental brackets to the axle.
6. Use of an axle on a unit other than the unit to which it was originally mounted.
7. Normal wear and tear.
8. Alignment.
9. Improper installation.
10. Unreasonable use (including failure to provide reasonable and necessary maintenance as specified in Dexter Axle’s current publication “Operation Maintenance Service Manual” including required maintenance after “Prolonged Storage”).

11. Improper wheel nut torque.

12. Cosmetic finish or corrosion.

LIMITATIONS

1. In all cases, Dexter Axle reserves the right to fully satisfy its obligations under the Limited Warranties by refunding the then-current list price of the defective axle (or, if the axle has been discontinued, of the most nearly comparable current product).

2. Dexter Axle reserves the right to furnish a substitute or replacement component or product in the event an axle or any component of the axle is discontinued or is otherwise unavailable.

3. These warranties are nontransferable.

GENERAL

THE FOREGOING WARRANTIES ARE EXCLUSIVE AND IN LIEU OF ALL OTHER WARRANTIES EXCEPT THAT OF TITLE, WHETHER WRITTEN, ORAL OR IMPLIED, IN FACT OR IN LAW (INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE).

These warranties give you specific legal rights, and you may also have other rights which vary from state to state.

DEXTER AXLE HEREBY EXCLUDES INCIDENTAL AND CONSEQUENTIAL DAMAGES, INCLUDING LOSS OF TIME, INCONVENIENCE, LOSS OF USE, TOWING FEES, TELEPHONE CALLS OR COST OF MEALS, FOR ANY BREACH OF ANY EXPRESS OR IMPLIED WARRANTY.

Some states do not allow limitations on how long an implied warranty lasts, or the exclusion or limitation of incidental or consequential damages, so the above exclusion or limitation may not apply to you.

Inquiries regarding these warranties should be sent to:
